Tucker, Nancy D. Anderson, 2004-09-30 This book is a reference for librarians mathematicians and statisticians involved in college and research level mathematics and statistics in the 21st century We are in a time of transition in scholarly communications in mathematics practices which have changed little for a hundred years are giving way to new modes of accessing information Where journals books indexes and catalogs were once the physical representation of a good mathematics library shelves have given way to computers and users are often accessing information from remote places Part I is a historical survey of the past 15 years tracking this huge transition in scholarly communications in mathematics Part II of the book is the bibliography of resources recommended to support the disciplines of mathematics and statistics These are grouped by type of material Publication dates range from the 1800 s onwards Hundreds of electronic resources some online both dynamic and static some in fixed media are listed among the paper resources Amazingly a majority of listed electronic resources are free

Analysis and Synthesis of Networked Control Systems Yuanqing Xia, Mengyin Fu, Guo-Ping Liu, 2011-03-17 Analysis and Synthesis of Networked Control Systems focuses on essential aspects of this field including quantization over networks data fusion over networks predictive control over networks and fault detection over networks The networked control systems have led to a complete new range of real world applications In recent years the techniques of Internet of Things are developed rapidly the research of networked control systems plays a key role in Internet of Things The book is self contained providing sufficient mathematical foundations for understanding the contents of each chapter It will be of significant interest to scientists and engineers engaged in the field of Networked Control Systems Dr Yuanqing Xia a professor at Beijing Institute of Technology has been working on control theory and its applications for over ten years **Brigham Young University**

Periodicals and Serials Catalog J. Reuben Clark, Jr., Library, 1974 *Reconfigurable Control of Nonlinear Dynamical Systems* Jan H. Richter, 2011-01-16 This research monograph summarizes solutions to reconfigurable fault tolerant control problems for nonlinear dynamical systems that are based on the fault hiding principle It emphasizes but is not limited to complete actuator and sensor failures In the first part the monograph starts with a broad introduction of the control

reconfiguration problems and objectives as well as summaries and explanations of solutions for linear dynamical systems The solution is always a reconfiguration block which consists of linear virtual actuators in the case of actuator faults and linear virtual sensors in the case of sensor faults The main advantage of the fault hiding concept is the reusability of the nominal controller which remains in the loop as an active system while the virtual actuator and sensor adapt the control input and the measured output to the fault scenario The second and third parts extend virtual actuators and virtual sensors towards the classes of Hammerstein Wiener systems and piecewise affine systems The main analyses concern stability recovery setpoint tracking recovery and performance recovery as reconfiguration objectives The fourth part concludes the monograph with descriptions of practical implementations and case studies The book is primarily intended for active researchers and practicing engineers in the field of fault tolerant control Due to many running examples it is also suitable for interested graduate students

Selected Problems of Fractional Systems Theory Tadeusz Kaczorek, 2011-05-10 This monograph covers some selected problems of positive fractional 1D and 2D linear systems It is an extended and modified English version of its preceding Polish edition published by Technical University of Bialystok in 2009 This book is based on the lectures delivered by the author to the Ph D students of the Faculty of Electrical Engineering of Bialystok University of Technology and of Warsaw University of Technology and on invited lectures in several foreign universities in the last three years

Handbook of Ballistics Karl Julius Cranz, 1921 **Computer Graphics through Key Mathematics** Huw Jones, 2001-04-27 This book introduces the mathematical concepts that underpin computer graphics It is written in an approachable way without burdening readers with the skills of how to do things The author discusses those aspects of mathematics that relate to the computer synthesis of images and so gives users a better understanding of the limitations of computer graphics systems Users of computer graphics who have no formal training and wish to understand the essential foundations of computer graphics systems will find this book very useful as will mathematicians who want to understand how their subject is used in computer image synthesis

Sorensen,2006-03-30 In the past decades model reduction has become an ubiquitous tool in analysis and simulation of dynamical systems control design circuit simulation structural dynamics CFD and many other disciplines dealing with complex physical models The aim of this book is to survey some of the most successful model reduction methods in tutorial style articles and to present benchmark problems from several application areas for testing and comparing existing and new algorithms As the discussed methods have often been developed in parallel in disconnected application areas the intention of the mini workshop in Oberwolfach and its proceedings is to make these ideas available to researchers and practitioners from all these different disciplines Design of Adaptive Finite Element Software Alfred Schmidt,Kunibert G. Siebert,2005

During the last years scientific computing has become an important research branch located between applied mathematics and applied sciences and engineering Highly efficient numerical methods are based on adaptive methods higher order discretizations fast linear and non linear iterative solvers multi level algorithms etc Such methods are integrated in the adaptive finite element software ALBERTA It is a toolbox for the fast and flexible implementation of efficient software for real life applications based on modern algorithms ALBERTA also serves as an environment for improving existent or developing new numerical methods in an interplay with mathematical analysis and it allows the direct integration of such new or improved methods in existing simulation software
