

## 2.1. NUMERICAL INTEGRATION

- We often only care about the size of the remainder, and write inequalities such as

$$\left| \frac{1}{N!} f^{(N)}(y)(x-a)^N \right| \leq \frac{1}{N!} \left( \max_{z \in [x,a]} |f^{(N)}(z)| \right) |x-a|^N,$$

or, for short,

$$\left| \frac{1}{N!} f^{(N)}(y)(x-a)^N \right| \leq \frac{1}{N!} M_N |x-a|^N,$$

where all the “constants” are hidden in the  $M_N$ . So, the remainder is in the order of  $|x-a|^N$ . The best constant in the remainder is then  $M_N = \max_{z \in [x,a]} |f^{(N)}(z)|$ .

- The degree of smoothness is often measured by the function  $\alpha$ . If  $\alpha$  is an integer, we can differentiate  $\alpha$  times. In fact, the Taylor series itself may diverge, but converges if  $\alpha > \alpha_0$  is small enough.

In order to study the problem of approximating  $\sum_{n=0}^{\infty} \frac{f^{(n)}(a)}{n!} (x-a)^n$ , let us consider  $f$  to be a smooth, bounded Taylor series with  $\alpha > \alpha_0 = \frac{1}{2}$ .

$$f(x) = \sum_{n=0}^{\infty} \frac{f^{(n)}(a)}{n!} (x-a)^n.$$

where  $a \in (a_0, a_1)$ . We will show that the Taylor series is bounded on  $[a_0, a_1]$ . This result is true as  $f$  has an arbitrary large number of derivatives and converging that  $\sum_{n=0}^{\infty} \frac{f^{(n)}(a)}{n!} (x-a)^n$  is bounded with respect to  $x$  on the interval  $[a_0, a_1]$  is true.

$$\sum_{n=0}^{\infty} \frac{f^{(n)}(a)}{n!} (x-a)^n = \sum_{n=0}^{\infty} \frac{f^{(n)}(a)}{n!} (x-a)^n.$$

We have to show that  $\sum_{n=0}^{\infty} \frac{f^{(n)}(a)}{n!} (x-a)^n$  is bounded on  $[a_0, a_1]$ .

$$\sum_{n=0}^{\infty} \frac{f^{(n)}(a)}{n!} (x-a)^n = \sum_{n=0}^{\infty} \frac{f^{(n)}(a)}{n!} (x-a)^n.$$

We will show that  $f$  is differentiable on  $[a_0, a_1]$ .

$$\sum_{n=0}^{\infty} \frac{f^{(n)}(a)}{n!} (x-a)^n = \sum_{n=0}^{\infty} \frac{f^{(n)}(a)}{n!} (x-a)^n.$$

**Vibrations, Dynamics and Structural Systems 2nd edition** Madhujit Mukhopadhyay, 2023-06-14 This textbook is the student edition of the work on vibrations dynamics and structural systems There are exercises included at the end of each chapter Canadian Mathematical Bulletin, 1966 **Catalogue for the Academic Year** Naval Postgraduate School (U.S.), 1958 **A Comparison of Explicit Time Integration Techniques for the Finite Element Shock Wave Equations** E. W. Miner, 1983 Numerical studies of three explicit two step time integration techniques for the one dimensional finite element shock wave equations have been conducted One of these integration techniques the Godunov scheme is first order accurate in time while the other the Lax Wendroff scheme is second order accurate in time The results show that overall the best numerical solutions were obtained by the standard Godunov scheme with either linear or parabolic spatial element A central weighted first step Godunov time integration provided results nearly as good The results of the condensed mass matrix formulation were clearly not as good as the results for the full matrix Results for the Lax Wendroff time integration showed severe oscillations in the solution and consequently were not as good as the Godunov time integration The present finite element results compare quite favorably with results from standard finite difference methods Author *Computer Aided and Integrated Manufacturing Systems: Optimization methods* Cornelius T. Leondes, 2003 This is an invaluable five volume reference on the very broad and highly significant subject of computer aided and integrated manufacturing systems It is a set of distinctly titled and well harmonized volumes by leading experts on the international scene The techniques and technologies used in computer aided and integrated manufacturing systems have produced and will no doubt continue to produce major annual improvements in productivity which is defined as the goods and services produced from each hour of work This publication deals particularly with more effective utilization of labor and capital especially information technology systems Together the five volumes treat comprehensively the major techniques and technologies that are involved **Formulas for Dynamics, Acoustics and Vibration** Robert D. K. Saul'Yev, 2014-07-10 International Series of Monographs in Pure and Applied Mathematics Volume 54 Integration of Equations of Parabolic Type by the Method of Nets deals with solving parabolic partial differential equations using the method of nets The first part of this volume focuses on the construction of net equations with emphasis on the stability and accuracy of the approximating net equations The method of nets or method of finite differences used to define the corresponding numerical method in ordinary differential equations is one of many

different approximate methods of integration of partial differential equations The other methods and some based on newer equations are described By analyzing these newer methods older and existing methods are evaluated For example the asymmetric net equations the alternating method of using certain equations and the method of mean arithmetic and multi nodal symmetric method point out that when the accuracy needs to be high the requirements for stability become more defined The methods discussed are very theoretical and methodological The second part of the book concerns the practical numerical solution of the equations posed in Part I Emphasis is on the commonly used iterative methods that are programmable on computers This book is suitable for statisticians and numerical analysts and is also recommended for scientists and engineers with general mathematical knowledge

**Integrated Photonics** Ginés Lifante, 2003-07-22 All integrated optical components and devices make use of waveguides where light is confined by total internal reflection The elements in such photonic chip are interconnected through waveguides and also the integrated optics components themselves are fabricated using waveguide configuration such as couplers switches modulators multiplexors amplifiers and lasers etc These components are integrated in a single substrate thus resulting in a compact and robust photonic device which can be optically connected through optical fibres With and increase in the number of integrated optical components and devices emerging from the research laboratories to the market place an up to date book is essential in collecting summarizing and presenting the new developed photonic devices This includes fundamental aspects technical aspects such as fabrication techniques and materials and characterisation and performance This is an advanced text aimed at specialists in the field of photonics but who may be new to the field of integrated photonics The fundamental aspects have been carefully considered and all the topics covered by the book start at a medium level making it highly relevant for undergraduate and post graduate students following this discipline
