Improvement Khalid Rehman Hakeem, Parvaiz Ahmad, Munir Ozturk, 2013-06-13 The improvement of crop species has been a basic pursuit since cultivation began thousands of years ago To feed an ever increasing world population will require a great increase in food production Wheat corn rice potato and few others are expected to lead as the most important crops in the world Enormous efforts are made all over the world to document as well as use these resources Everybody knows that the introgression of genes in wheat provided the foundation for the Green Revolution Later also demonstrated the great impact that genetic resources have on production Several factors are contributing to high plant performance under different environmental conditions therefore an effective and complementary use of all available technological tools and resources is needed to meet the challenge Plant signaling: Understanding the molecular crosstalk Khalid Rehman Hakeem, Reiaz Ul Rehman, Inayatullah Tahir, 2013-10-25 Plant signalling has emerged as an integrated field which has become indispensable in recent times to study any biological process Over the last decade an enormous amount of information has been generated in this field and the advances in information technology gave birth to bioinformatics which has helped greatly in managing the galaxy of information It is now possible to view the different information s in a systems biology approach which has unravelled the association new processes and thus helped us enormously in understanding of the biological processes The present book is an attempt at understanding the plant signalling processes with different perspectives Even though the plants are sessile but there exists a tremendous interconnected network of perception at morphological physiological and molecular levels The impact of the surrounding environment in terms of abiotic and biotic stresses is significant in terms of its survival adaptation and productivity for the human welfare The plants possess a wide array of processes at the organ tissue and cellular levels which are governed by a plethora of molecules The molecules govern individual processes and these exists a cross talk between them to form a complex network of processes The book tries to envision how different processes are operating at different points in the life cycle of the plant
