Sport and Exercise Nutrition Susan A. Lanham-New, Samantha Stear, Susan Shirreffs, Adam Collins, 2011-08-10 Please note that digital editions do not include all the illustrations found in the printed book Now widely adopted on courses throughout the world the prestigious Nutrition Society Textbook series provides students with the scientific basics in nutrition in the context of a systems and disease approach

rather than on a nutrient by nutrient basis. In addition, books provide a means to enable teachers and students to explore the core principles of nutrition and to apply these throughout their training to foster critical thinking at all times. This NS Textbook on Sport and Exercise Nutrition has been written to cover the latest information on the science and practice of sport and exercise nutrition. A key concept behind this textbook is that it aims to combine the viewpoints of world leading nutrition experts from both academia research and a practical standpoint. Plus where necessary there are additional practitioner based authors to ensure theory is translated into practice for each chapter in the form of either practice tips or information sheets at the end of relevant chapters. The textbook in essence can be divided into three distinct but integrated parts. Part 1 covers the key components of the science that supports the practice of sport and exercise nutrition including comprehensive reviews on nutrients both in general and as exercise fuels, exercise physiology, hydration, micronutrients and supplements. Part 2 moves into focusing on specific nutrition strategies to support different types of training including resistance, power, sprint, middle distance, speed, endurance, endurance technical, skill, team and specific competition nutrition needs. The unique format of this textbook is that it breaks down nutrition support into training specific as opposed to the traditional sport specific support. This reflects the majority of current sport and exercise requirements of the need to undertake concurrent training and therefore facilitating targeted nutrition support to the different training components through the various macro and micro training cycles. Part 3 explores some of the practical issues encountered in working in the sport and exercise nutrition field and includes key sport related topics such as disability, sport weight management, eating disorders, bone and gut health, immunity, injury, travel and special populations and situations.

READERSHIP Students of nutrition and dietetics at both undergraduate and postgraduate level. All those working in the field of nutrition and related health sciences.

The Role of Protein and Amino Acids in Sustaining and Enhancing Performance Institute of Medicine, Committee on Military Nutrition Research, 1999-09-15. It is a commonly held belief that athletes particularly body builders have greater requirements for dietary protein than sedentary individuals. However the evidence in support of this contention is controversial. This book is the latest in a series of publications designed to inform both civilian and military scientists and personnel about issues related to nutrition and military service. Among the many other stressors they experience soldiers face unique nutritional demands during combat. Of particular concern is the role that dietary protein might play in controlling muscle mass and strength, response to injury and infection and cognitive performance. The first part of the book contains the committee's summary of the workshop responses to the Army's questions, conclusions and recommendations. The remainder of the book contains papers contributed by speakers at the workshop on such topics as the effects of aging and hormones on regulation of muscle mass and function, alterations in protein metabolism due to the stress of injury or infection, the role of individual amino acids, the components of proteins as neurotransmitters, hormones and modulators of various physiological processes and the efficacy and safety considerations associated with dietary supplements.
