Nutritional And Toxicological Consequences Of Food Processing:

Nutritional and Toxicological Consequences of Food Processing Mendel Friedman, 2013-11-21 A variety of processing methods are used to make foods edible to permit storage to alter texture and flavor to sterilize and pasteurize food and to destroy microorganisms and other toxins These methods include baking broiling cooking freezing frying and roasting Many such efforts have both beneficial and harmful effects It is a paradox of nature that the processing of foods can improve nutrition quality safety and taste and yet occasionally lead to the formation of anti nutritional and toxic compounds These multifaceted consequences of food processing arise from molecular interactions among nutrients with each other and with other food ingredients Since beneficial and adverse effects of food processing are of increasing importance to food science nutrition and human health and since many of the compounds formed have been shown to be potent carcinogens and growth inhibitors in animals I organized a symposium broadly concerned with the nutritional and toxicological consequences of food processing The symposium was sponsored by the American Institute of Nutrition AIN Federation of American Societies for Experimental Biology FASEB for its annual meeting in Washington D C April 1-5 1990 Invited speakers were asked to develop at least one of the following topics 1 Nutrient nonnutrient interactions between amino acids proteins carbohydrates lipids minerals vitamins tannins fiber natural toxicants etc 2 Effects of radiation 3 Thermally induced formation of dietary mutagens antimutagens carcinogens anticarcinogens antioxidants and growth inhibitors 4 Effects of pH on nutritional value and safety

Impact of Processing on Food Safety Lauren S. Jackson, Mark G. Knize, Jeffrey N. Morgan, 2012-12-06 The contents of this book are the proceedings of the ACS symposium Impact of Processing on Food Safety which was held April 16-17 1997 at the American Chemical Society National Meeting in San Francisco CA This symposium brought together researchers from diverse backgrounds in academia government and industry Twenty speakers discussed topics ranging from the regulatory aspects of food processing to the microbiological and chemical changes in food during processing The main goal of food processing is to improve the microbial safety of food by de

destroying pathogenic and spoilage organisms Food processing can also improve food safety by destroying or eliminating naturally occurring toxins chemical contaminants and antinutritive factors Unfortunately processing can also cause chemical changes that result in the formation of toxic or antinutritive factors The purpose of this book is to summarize our knowledge of both the beneficial and deleterious effects of processing Chapter 1 considers the consumer's perceptions about food contaminants and food processing Chapter 2 summarizes the effects of traditional and nontraditional processing methods on microorganisms in food Chapters 3-6 review the effects of processing on lipids fatty acids and cholesterol in food Changes in the nutritive value of vitamins and minerals as a result of processing are discussed in chapter 7 Chapter 8 concentrates on how processing reduces the allergenicity of some foods

Chemistry and Safety of Acrylamide in Food Mendel Friedman, Don Mottram, 2006-07-18 Reports that heat processing of foods induces the formation of acrylamide heightened interest in the chemistry biochemistry and safety of this compound Acrylamide induced neurotoxicity reproductive toxicity genotoxicity and carcinogenicity are potential human health risks based on animal studies Because exposure of humans to acrylamide can come from both external sources and the diet there exists a need to develop a better understanding of its formation and distribution in food and its role in human health To contribute to this effort experts from eight countries have presented data on the chemistry analysis metabolism pharmacology and toxicology of acrylamide Specifically covered are the following aspects exposure from the environment and the diet biomarkers of exposure risk assessment epidemiology mechanism of formation in food biological alkylation of amino acids peptides proteins and DNA by acrylamide and its epoxide metabolite glycidamide neurotoxicity reproductive toxicity and carcinogenicity protection against adverse effects and possible approaches to reducing levels in food Cross fertilization of ideas among several disciplines in which an interest in acrylamide has developed including food science pharmacology toxicology and medicine will provide a better understanding of the chemistry and biology of acrylamide in food and can lead to the development of food processes to decrease the acrylamide content of the diet

Environmental Health Perspectives, 1993 Recent Advances of Research in Antinutritional Factors in Legume Seeds and Rapeseed A J M Jansman, G D Hill, J Huisman, A F B Van Der Poel, 1998-07 This publication contains the proceedings of the 4th International Workshop on Antinutritional Factors in Legume Seeds and Oilseeds held in Toledo Spain on 8-10 March 2004 This series of meetings bring together experts working in this field of Science from throughout the world A major feature of each conference session is an invited review which outlines the advances that have been made in a particular area since the last meeting A major factor that was considered at this meeting was the likely impact of plant genetic modification on the nutritional quality of their seeds for human and animal feeding As an example already a number of legume species and rapeseed have been modified to improve the sulphur amino acid content of their seed and thus their protein quality Besides the major grain legume species and rapeseed that had been discussed at previous meetings in this

series number of crop products as potential protein sources for animal feeding were considered for the first time These included cottonseed meal linseed meal and sunflower seed meal The potential of some new exotic crops from Mexico was also covered including Mexican species of the genus *Lupinus* and a Mexican plant from the same family as castor bean which has a very high oil content but is usually toxic Work from Cuba compared the nutritional characteristics of soybean with a range of tropical grain legume species which have received little previous attention A major change at this meeting was the greater consideration of the effects both positive and negative of the consumption of these seeds for human nutrition A major review on the development of allergenicity to legume seed in humans is included There was also consideration of the potential role of antinutritional factors in reducing the growth of various types of tumour cells The presented papers also suggest that the consumption of legume seed in the diet can potentially reduce serum cholesterol levels Overall from the 5 conference sessions there are 52 papers Of these 7 are major invited reviews on the current state of research in this important area for human and animal feeding
