Nutrition and Medical Practice Lewis A. Barness, Yank D. Coble, Donald Ian MacDonald, George Christakis, 2012-12-06

All forms of life require food materials in certain minimum amounts to insure an active life and successful reproduction. Nutrition is concerned with what these materials are, how they function, what effects they have when absent, and what happens to them when ingested. During the past two centuries, such nutritional disorders as scurvy, beriberi, rickets, and pellagra have been discovered, successfully treated, and eradicated by physicians in developed countries. In this century, such noted researchers as Rose, Meyerhof, and Krebs have contributed enormously to the field of nutrition. Currently, research is evolving new concepts and facts so rapidly that the average practitioner can hardly keep current even in his own field of medicine. Bona fide research by universities and governmental agencies has produced voluminous information, much of which seems contradictory and therefore tends to confuse the general public, particularly in the area of potential carcinogens. This confusion has prompted consumer groups, politicians, and social welfarists to bring pressures and demands on medical schools and practitioners of medicine to increase their knowledge and concern in the field of nutrition. Taking advantage of, and adding to this confusion, are the health food faddists and cultists, some only for monetary gain and others with a real religious zeal.
