Nutritional Toxicology Volume 2:

Nutritional Toxicology Volume 2 John N. Hathcock, 2013-06-11 Nutritional Toxicology Volume II discusses the various interactions between nutritional phenomena and toxicologic processes. It addresses particular subjects that have become substantially more important through the development of new knowledge, significant increases in knowledge, or increased awareness of potential effects on human health and well-being. The implications of such knowledge have impact on basic research, toxicity testing, public health, food and agriculture programs, and food safety regulation. The book begins with a review of the role and importance of macro and micronutrients on detoxification processes of foreign compounds after absorption. This is followed by separate chapters on mixed function oxidation in the liver, the metabolic and nutritional effects of ethanol, the effects of malnutrition on drug metabolism, interaction of nutrient intake with DNA and chromatin, and how such interactions may affect the process of toxicogenesis in the nucleus. Subsequent chapters cover mutagens in cooked foods, food sensitivities, anatomical, cardiovascular, and behavioral effects of dietary caffeine, the toxicology of dietary tin, aluminum, and selenium, and the toxicology of pesticides in foods. *Nutritional toxicology* John N. Information Resources in Toxicology, Volume 1: Background, Resources, and Tools, 2020-05-16 This new fifth edition of *Information Resources in Toxicology* offers a consolidated entry portal for the study, research, and practice of toxicology. Both volumes represent a unique, wide-ranging, curated international annotated bibliography and directory of major resources in toxicology and allied fields such as environmental and occupational health, chemical safety, and risk assessment. The editors and authors are among the leaders of the profession, sharing their cumulative wisdom in toxicology's subdisciplines. This edition keeps pace with the digital world in directing and linking readers to relevant websites and other online tools. Due to the increasing size of the hardcopy publication, the current edition has been divided into two volumes to make it easier to handle and consult. Volume 1: Background, Resources, and Tools, arranged in 5 parts, begins with chapters on the science of toxicology, its history, and informatics framework in Part 1. Part 2 continues with chapters organized by more specific subject, such as cancer, clinical toxicology, genetic toxicology, etc. The categorization of chapters by resource format, for example, journals and newsletters, technical reports, organizations, constitutes Part 3. Part 4 further considers toxicology's presence via the Internet, databases, and software tools. Among the miscellaneous topics in the concluding Part 5 are laws and regulations, professional education, grants and funding, and patents. Volume 2: The Global Arena offers contributed chapters focusing on the toxicology contributions of over 40 countries, followed by a glossary of toxicological terms and an appendix of popular quotations related to the field. The book, offered in both print and electronic formats, is carefully structured, indexed, and cross-referenced to enable users to easily find answers to their questions or serendipitously locate useful knowledge they were not originally aware they needed. Among the many timely topics receiving increased emphasis are disaster preparedness.

nanotechnology omics risk assessment societal implications such as ethics and the precautionary principle climate change and children s environmental health Introductory chapters provide a backdrop to the science of toxicology its history the origin and status of toxicoinformatics and starting points for identifying resources Offers an extensive array of chapters organized by subject each highlighting resources such as journals databases organizations and review articles Includes chapters with an emphasis on format such as government reports general interest publications blogs and audiovisuals Explores recent internet trends web based databases and software tools in a section on the online environment Concludes with a miscellany of special topics such as laws and regulations chemical hazard communication resources careers and professional education K 12 resources funding poison control centers and patents Paired with Volume Two which focuses on global resources this set offers the most comprehensive compendium of print digital and organizational resources in the toxicological sciences with over 120 chapters contributions by experts and leaders in the field

Perils of Progress John Ashton, Ronald S. Laura, 1999 This work offers a challenge to our society's largely unquestioning commitment to new technologies and practical advice on how to deal with their adverse effects While modern technologies have no doubt brought many benefits the authors argue that our confidence in them is seriously misplaced They consider an array of health and environmental issues including the damaging effects on human health of certain microwaves including those from mobile phones and television transmission towers the effects of aluminium in food and other consumer products and the evidence that the acids in margarines may be more detrimental to health than butter
