Fishman, 2025 This invaluable treatise in 31 chapters and two volumes breaks down strategic reasoning behind every phase of patent infringement litigation from prelitigation issues and initial client counseling through the filing of the Notice of Appeal The book explores the perspectives and strategies of both

patent owners and patent challengers providing updates on the most recent trends in patent litigation and winning strategies from some of the country's leading attorneys Reflecting on Yale Professor William Robinson's 1890 three volume treatise on patents a federal judge once observed that little has changed in the grand framework of patent law However while the view from above may seem unchanged the ground level realities of patent litigation have undergone profound transformation This field has been continually reshaped by an array of forces from sweeping Supreme Court decisions echoing through lower courts to the growing intricacies of emerging technologies such as artificial intelligence IoT and biopharmaceuticals Patent litigation continues to change and evolve spurred on by challenges presented by patentability non practicing entities and influential procedures in Texas and Delaware courts The Federal Circuit now deeply divided has accepted its first en banc utility patent case in six years while Section 101 persists as a contentious and uncertain area in both case law and legislative proposals The post TC Heartland landscape developments in PTAB practices and the impact of arbitration have further redefined the litigation process Against this backdrop our contributors offer insights from the most respected leaders at the bar and bench sharing expertise and perspectives on these pressing topics and more

Amalia Athanasiadou, 2018-08-14 Reverse payment settlements or pay for delay agreements between originators and generic drug manufacturers create heated debates regarding the balance between competition and intellectual property law. These settlements touch upon sensitive issues such as timely generic entry and access to affordable pharmaceuticals and also the need to preserve innovation incentives for originators and to strengthen the pipeline of life saving pharmaceuticals. This book is one of the first to critically and comparatively analyse how such patent settlements and various other strategies employed by the pharmaceutical industry are scrutinised by both United States US and European courts and enforcement authorities and to discuss the applicable legal tests and the main criteria used for their assessment. The book's ultimate objective is to provide guidance to the pharmaceutical industry regarding the types of patent settlements strategies and conduct which may be problematic from US antitrust and European Union EU competition law perspectives and to assist practitioners in structuring settlements which are both efficient and compliant. To this end an exhaustive legal analysis of some of the most controversial issues regarding pharmaceutical patent settlements is provided including the lengthy split among US Circuit Courts on the issue of pay for delay settlements its resolution by the US Supreme Court in *FTC v Actavis* and subsequent jurisprudence the decision of *Lundbeck v Commission* by the European General Court and the *Servier* decision of the European Commission the *Roche Novartis* decision of the European Court of Justice and the most important decisions by National Competition Authorities on pharma patent settlements in the EU an overview of other types of

strategies such as product hopping and product reformulations no authorised generic commitments problematic side deals mechanisms affecting generic substitution the rejection of the scope of the patent test in both the US and the EU and the balancing of patent law and antitrust law considerations in the prevailing applicable tests the benefits of settlements and the main criteria for assessing their legitimacy under US antitrust and EU competition law The analysis provides concrete examples of both illegitimate and legitimate settlements and strategies emphasising on conduct that falls within a grey zone and on the circumstances and criteria under which such conduct could be deemed problematic from an antitrust perspective This book will serve as a valuable guide for pharmaceutical companies wishing to minimise the risk of engaging in conduct that could potentially infringe US antitrust and EU competition law It further aims to save courts and enforcement agencies and also practitioners and academics considerable time and resources by providing an exhaustive analysis of the relevant caselaw with the ultimate goal to increase legal certainty on the most controversial aspects of patent settlements in the pharmaceutical industry
