Power Of Human Imagination New Methods In Psychotherapy:

The Power of Human Imagination Jerome L. Singer, Kenneth S. Pope, 2012-12-06 For at least half of the twentieth century psychology and the other mental health professions all but ignored the significant adaptive possibilities of the human gift of imagery Our capacity seemingly to duplicate sights sounds and other sensory experiences through some form of central brain process continues to remain a mysterious almost miraculous skill Because imagery is so much a private experience experimental psychologists found it hard to measure and turned their attention to observable behaviors that could easily be studied in animals as well as in humans Psychoanalysts and others working with the emotionally disturbed continued to take imagery information seriously in the form of dream reports transference fantasies and as indications of hallucinations or delusions On the whole however they emphasized the maladaptive aspects of the phenomena the distortions and defensiveness or the regressive qualities of daydreams and sequences of images The present volume grows out of a long series of investigations by the senior author that have suggested that daydreaming and the stream of consciousness are not simply manifestations in adult life of persisting phenomena of childhood Rather the data suggest that imagery sequences represent a major system of encoding and transforming information a basic human capacity that is inevitably part of the brain's storage process and one that has enormous potential for adaptive utility A companion volume *The Stream of Consciousness* edited by Kenneth S. Pope and Jerome L. **Gnosis** Dan Merkur, 1993-10-05 *Gnosis* traces the use of powerful gnostic visionary techniques from Hellenistic Gnosticism and Jewish merkabah mysticism through Muhammad the Ismaeilis and theosophical Sufism to medieval neoplatonism and renaissance alchemy **Therapeutic Voicework** Paul Newham, 1998 Based on Paul Newham's experience as a voice therapist and on his work running a professional training course in the psychotherapeutic use of singing this text explores both the theory and practice behind the use of voice and singing in expressive arts therapy *Alternative States of Consciousness in Shamanism, Imaginal Psychotherapies, Hypnotherapy, and Meditation Including a Shamanism and Meditation Inspired Personal and Professional Training Program for the 21st Century Psychotherapist* Allen Holmquist, 2009-08 Shamanism hypnosis imaginal psychotherapies and meditation are based on the use of what we in the modern western world think of as non ordinary human consciousness These four modalities have fundamental similarities and differences in purpose theory technique type of alternative consciousness and their application of non ordinary reality Shamanism the oldest and most intertwined with the cultures in which it is practiced will be explored as a model for individual healing and transformation and professional training The shamanic way will also be explored as a model of consciousness and a world view that offers individuals groups and society much needed coping mechanisms healing techniques and transformative values that may be helpful in dealing with this trying and important transition time for humanity Imaginal therapies meditation and hypnosis all have their roots in shamanism although in some parts of the world at certain times in history shamanism borrowed from meditation in its adaptation and development
