Plotting Apocalypse Jennie Chapman,2013-09-13 It is the not too distant future and the rapture has occurred Every born again Christian on the planet has without prior warning been snatched from the earth to meet Christ in the heavens while all those without the requisite faith have been left behind to suffer the wrath of the Antichrist as the earth enters into its final days This is the premise that animates the enormously popular cultural phenomenon that is the Left Behind series of prophecy novels co written by Tim LaHaye and Jerry Jenkins and published between 1995 and 2007 But these books are more than fiction it is the sincere belief of many evangelicals that these events actually will occur soon Plotting Apocalypse delves into the world of rapture prophecy and tribulation in order to account for the extraordinary cultural salience of these books and the impact of the world they project Through penetrating readings of the novels Chapman shows how the series offers a new model of evangelical agency for its readership The novels teach that although believers are incapable of changing the course of a future that has been preordained by God they can become empowered by learning to read the prophetic books of the Bible and the signs of the times correctly Reading and interpretation become key indices of agency in the world that Left Behind limns Plotting Apocalypse reveals the significant cultural work that Left Behind performs in developing a counter narrative to the passivity and fatalism that can characterize evangelical prophecy belief Chapman s arguments may bear profound implications for the future of American evangelicalism and its interactions with culture society and politics

Space and Sense Susanna Millar,2008-06-30 How do we perceive the space around us locate objects within it and make our way through it What do the senses contribute This book focuses on touch in order to examine which aspects of vision and touch overlap in spatial processing It argues that spatial processing depends crucially on integrating diverse sensory inputs as reference cues for the location distance or direction response that spatial tasks demand Space and Sense shows how perception by touch as by

vision can be helped by external reference cues and that visual illusions that are also found in touch depend on common factors and do not occur by chance Susanna Millar presents new evidence on the role of spatial cues in touch and movement both with and without vision and discusses the interaction of both touch and movement with vision in spatial tasks The book shows how perception by touch as by vision can be helped by external reference cues and that visual illusions that are also found in touch depend on common factors and do not occur by chance It challenges traditional views of explicit external reference cues showing that they can improve spatial recall with inputs from touch and movement contrary to the held belief Space and Sense provides empirical evidence for an important distinction between spatial vision and vision that excludes spatial cues in relation to touch This important new volume extends previous descriptions of bimodal effects in vision and space
