Scalable Performance Signalling And Congestion Avoidance:

Scalable Performance Signalling and Congestion Avoidance Michael Welzl, 2012-12-06 This book answers a question which came about while the author was working on his diploma thesis 1 would it be better to ask for the available bandwidth instead of probing the network like TCP does The diploma thesis was concerned with long distance musical interaction NetMusic This is a very peculiar application only a small amount of bandwidth may be necessary but timely delivery and reduced loss are very important Back then these requirements led to a thorough investigation of existing telecommunication network mechanisms but a satisfactory answer to the question could not be found Simply put the answer is yes this work describes a mechanism which indeed enables an application to ask for the available bandwidth This obviously does not only concern online musical collaboration any longer Among others the mechanism yields the following advantages over existing alternatives good throughput while maintaining close to zero loss and a small bottleneck queue length usefulness for streaming media applications due to a very smooth rate feasibility for satellite and wireless links high scalability Additionally a reusable framework for future applications that need to ask the network for certain performance data was developed

Network Congestion Control Michael Welzl, 2005-12-13 As the Internet becomes increasingly heterogeneous the issue of congestion control becomes ever more important In order to maintain good network performance mechanisms must be provided to prevent the network from being congested for any significant period of time Michael Welzl describes the background and concepts of Internet congestion control in an accessible and easily comprehensible format Throughout the book not just the how but the why of complex technologies including the Transmission Control Protocol TCP and Active Queue Management are explained The text also gives an overview of the state of the art in congestion control research and an insight into the future Network Congestion Control Presents comprehensive easy to read documentation on

the advanced topic of congestion control without heavy maths Aims to give a thorough understanding of the evolution of Internet congestion control how TCP works why it works the way it does and why some congestion control concepts failed for the Internet Explains the Chiu Jain vector diagrams and introduces a new method of using these diagrams for analysis teaching design Elaborates on how the theory of congestion control impacts on the practicalities of service delivery Includes an appendix with examples problems to assist learning Provides an accompanying website with Java tools for teaching congestion control as well as examples links to code and projects bibliography This invaluable text will provide academics and researchers in computer science electrical engineering and communications networking as well as students on advanced networking and Internet courses with a thorough understanding of the current state and future evolution of Internet congestion control Network administrators and Internet service and applications providers will also find Network Congestion Control a comprehensive accessible self teach tool

Building Scalable Network Services Cheng Jin,Sugih Jamin,Danny Raz,Yuval Shavitt,2012-12-06 Building Scalable Network Services Theory and Practice is on building scalable network services on the Internet or in a network service provider s network The focus is on network services that are provided through the use of a set of servers The authors present a tiered scalable network service model and evaluate various services within this architecture The service model simplifies design tasks by implementing only the most basic functionalities at lower tiers where the need for scalability dominates functionality The book includes a number of theoretical results that are practical and applicable to real networks such as building network wide measurement monitoring services and strategies for building better P2P networks Various issues in scalable system design and placement algorithms for service nodes are discussed Using existing network services as well as potentially new but useful services as examples the authors formalize the problem of placing service nodes and provide practical solutions for them
