Modeler,1992-01-01 Gives beginners practical advice on tools building painting detailing and applying decals to scale model planes tanks and ships Includes shortcuts and innovations that deliver quality and realism to all types of scale models From FineScale Modeler magazine      **A Guide to Modeling Coastal Morphology** Dano Roelvink,J. A. Roelvink,Ad Reniers,2012

Process based morphodynamic modelling is one of the relatively new tools at the disposal of coastal scientists engineers and managers On paper it offers the possibility to analyse morphological processes and to investigate the effects of various measures one might consider to alleviate some problems For these to be applied in practice a model should be relatively straightforward to set up It should be accurate enough to represent the details of interest it should run long enough and robustly to see the real effects happen and the physical processes represented in such a way that the sediment generally goes in the right direction at the right rate Next practitioners must be able to judge if the patterns and outcomes of the model are realistic and finally translate these colour pictures and vector plots to integrated parameters that are relevant to the client or end user In a nutshell this book provides an in depth review of ways to model coastal processes including many hands on exercises      **Subject Guide to Books in Print** ,1997      Official catalogue & guide Royal naval exhibition,1891

*A Biologist's Guide to Mathematical Modeling in Ecology and Evolution* Sarah P. Otto, Troy Day, 2011-09-19 Thirty years ago biologists could get by with a rudimentary grasp of mathematics and modeling Not so today In seeking to answer fundamental questions about how biological systems function and change over time the modern biologist is as likely to rely on sophisticated mathematical and computer based models as traditional fieldwork In this book Sarah Otto and Troy Day provide biology students with the tools necessary to both interpret models and to build their own The book starts at an elementary level of mathematical modeling assuming that the reader has had high school mathematics and first year calculus Otto and Day then gradually build in depth and complexity from classic models in ecology and evolution to more intricate class structured and probabilistic models The authors provide primers with instructive exercises to introduce readers to the more advanced subjects of linear algebra and probability theory Through examples they describe how models have been used to understand such topics as the spread of HIV chaos the age structure of a country speciation and extinction Ecologists and evolutionary biologists today need enough mathematical training to be able to assess the power and limits of biological models and to develop theories and models themselves This innovative book will be an indispensable guide to the world of mathematical models for the next generation of biologists A how to guide for developing new mathematical models in biology Provides step by step recipes for constructing and analyzing models Interesting biological applications Explores classical models in ecology and evolution Questions at the end of every chapter Primers cover important mathematical topics Exercises with answers Appendixes summarize useful rules Labs and advanced material available
