management, by J.C. Duncan ,1911 *Disaster Preparedness* Association of Research Libraries,1993 Most librarians know the importance of disaster preparedness Many disasters could have been prevented altogether or have had reduced impact if institutions had been better prepared This resource guide suggests how disaster preparedness can be achieved at cultural institutions Twenty three basic resource articles are presented to introduce disaster preparedness They deal with the safety of collections rather than the safety of staff and related issues such as security and environmental control are not addressed Of the materials that cover what to do once a disaster has occurred most emphasize water damage because so many causes of disaster result in water damage The resource guide is supplemented by a list of 23 selected readings When a choice had to be made between a readily available source and one that was difficult to obtain the hard to obtain one was included in the resource guide and a reference to the other was provided in the bibliography The basic processes for disaster preparedness include 1 brainstorming potential disasters 2 investigating responses to past disasters 3 outlining a disaster plan 4 determining remaining needs and 5 developing recommendations SLD **Fire Hazards in Industry** Norman Thomson,2001-12-06 Significant loss to business occurs through fires in the workplace Whether large or small fire causes personal suffering damage to plant equipment and buildings and loss of business Fire legislation has changed over the past few years especially with the introduction of European Directives New regulations mean that employers have to carry out fire risk assessment and then as a result of their findings put in place control measures to prevent loss of life Fire Hazards in Industry has been designed to cover in general terms exactly what is required of employers It is written in simple language and considers the basics of good fire safety management After reading Fire Hazards in Industry any employer safety professional or fire safety officer should be able to install a system for carrying out fire risk assessment In addition to sections relating to the legal aspects of fire prevention the book explains the concepts of fire modelling explosions and combustion reactions There is also a section relating to common industry fire hazards and hazards associated with electrical equipment Knowledge of all these topics would be required if a person were to attempt to carry out fire risk assessment Throughout the book past case histories are used to illustrate certain aspects of fire and the causes of fire The cases used have all been published by the Health and Safety Executive as a result of their investigations These include Abbeystead Frodingham steelworks HMS Glasgow BP Grangemouth and many more This book will be equally relevant to motor manufacturing as it is to the chemical industry There are many case studies included that deal with fire hazards that are found in general industry Fire Hazards in Industry is suitable for those who have relatively limited experience in fire safety and therefore use it as part of their career and educational development but also can be used as reference material for those experienced professionals who have fire safety included in their day to day responsibility
