**Neural Tube Defects** Diego F. Wyszynski, 2005-10-13 Neural tube defects affect about 4000 pregnancies each year and are thus among the most common of severe birth defects Prenatal diagnosis can now detect about 70% of neural tube defects but the tests produce many false positives so the question is under what circumstances should they be recommended This comprehensive volume the collective knowledge of more than 55 experts in the field provides lucid and authoritative discussions on this topic as well as on a wide variety of theoretical experimental and clinical issues

**Mortality and Maldevelopment** Harold Kalter, 2009-02-28 Congenital malformations are worldwide occurrences striking in every condition of society These severe physical abnormalities which are present at birth and affecting every part of the body happen more often than usually realized once in every 33 births The most common after heart defects are those of the neural tube the brain and spinal cord which happen in as many as one in every 350 births They have been noted as curiosities in man and beast throughout recorded history and received great attention in our time by various fields of study for example their faulty prenatal development by embryologists familial patterns by geneticists causation by environmentalists and variability by population scientists Attention turned much in recent years to the relation of these malformations to deficiency of a particular dietary ingredient folic acid a subject this book analyzes in depth The greatest conundrum of all which this latest matter like so much else hinges on is the amazing fact of the tremendous almost universal decrease in the frequency of these anomalies since early in the 20th century The puzzle is What can this downward trend possibly mean and at bottom Whether it is part of a long term cyclical pattern This fascinating biological phenomenon is explored in the book together with various other topics

*Prevention of Spina Bifida and Other Neural Tube Defects* John Dobbing, 1983 Tube defect prevention in high incidence areas and epidemiological evidence concerning the cause of neural tube defects Two additional topics appended to the text discuss a regional study of maternal diet and nutrition during early pregnancy and following delivery and the economic aspects associated with neural tube defect prevention Tabular and graphical presentations of data and literature citations are provided throughout the text
