Numerical Taxonomy Joseph Felsenstein, 2013-06-29 The NATO Advanced Study Institute on Numerical Taxonomy took place on the 4th 16th of July 1982 at the Kur und Kongresshotel Residenz in Bad Windsheim Federal Republic of Germany This volume is the proceedings of that meeting and contains papers by over two thirds of the participants in the Institute Numerical taxonomy has been attracting increased attention from systematists and evolutionary biologists It is an area which has been marked by debate and conflict sometimes bitter Happily this meeting took place in an atmosphere of GemUtlichkeit though scarcely of unanimity I believe that these papers will show that there is an increased understanding by each taxonomic school of each others positions This augurs a period in which the debates become more concrete and specific Let us hope that they take place in a scientific atmosphere which has occasionally been lacking in the past Since the order of presentation of papers in the meeting was affected by time constraints I have taken the liberty of rearranging them into a more coherent subject ordering The first group of papers taken from the opening and closing days of the meeting debate philosophies of classification The next two sections have papers on congruence clustering and ordination A notable concern of these participants is the comparison and testing of classifications This has been missing from many previous discussions of numerical classification

Beyond Cladistics David Mervyn Williams, Sandra Knapp, 2010 This multifarious volume does a splendid job of reflecting the breadth and depth of fundamental questions about the methods of systematics and biogeography from the practical applications of conservation biology to issues of wide interest to evolutionary biologists Dr Norman I Platnick American Museum of Natural History A fun and informative volume that everyone interested in the subject will enjoy This book is full of important discussions on Botany Cladistics and Biogeography Vicki Funk National Museum of Natural History Smithsonian Institution The Branching Of A Paradigm is the intriguing theme of this volume on the myriad of ways cladistics has impacted modern biology Surprises from floristics to recent thoughts on epistemology await the reader Dennis Stevenson New York Botanical Garden

From Observations to Optimal Phylogenetic Trees Pablo A. Goloboff, 2022-07-22 Taxonomists specializing in different groups once based phylogenetic analysis only on morphological data molecular data was used more rarely Although molecular systematics is routine today the use of morphological data continues to be important especially for phylogenetic placement of many taxa known only from fossils and rare or difficult to collect species In addition morphological analyses help identify potential biases in molecular analyses And finally scenarios with respect to morphology continue to motivate biologists the beauty of a cheetah or a baobab does not lie in their DNA sequence but instead on what they are and do This book is an up to date revision of methods and principles of phylogenetic analysis of morphological data It is also a general guide for using the computer program TNT in the analysis of such data The book covers the main aspects of phylogenetic analysis and general methods to compare classifications derived from molecules and morphology The basic aspects of molecular analysis are covered only as needed to highlight the differences

Howard,Stewart H. Berlocher,1998 Speciation is one of the great themes of evolutionary biology It is the process through which new species are born and diversity generated Yet for many years our understanding of the process consisted of little more than a perception that if populations are isolated geographically they will diverge genetically and may come to form new species This situation began to change in the 1960s as an increasing number of biologists challenged the exclusivity of allopatric speciation and began to probe more deeply into the actual process by which divergence occurs and reproductive isolation is acquired This focus on process led to many new insights but numerous questions remain and speciation is now one of the most dynamic areas of research in modern evolutionary biology This volume presents the newest research findings on speciation bringing readers up to day on species concepts modes of speciation and the nature of reproductive barriers It also discusses the forces that drive divergence of populations the

genetic control of reproductive isolation and the role played by hybrid zones and hybridization in speciation
