L. Arnold and G. L. Kittredge**, 1900 More Than Guided Reading Cathy Mere, 2005 Is there too much emphasis on guided reading in primary classrooms It's a question that many educators like kindergarten teacher and literacy coach Cathy Mere are starting to ask Guided reading provides opportunities to teach students the strategies they need to learn how to read increasingly challenging texts but Cathy found that she needed to find other ways to help students gain independence While maintaining guided reading as an important piece of their reading program teachers need to offer students

opportunities during the day to develop as readers to learn to choose books to find favorite genres and authors and to talk about their reading In *More Than Guided Reading* Cathy shares her journey as she moved from focusing on guided reading as the center of her reading program to placing children at the heart of literacy learning not only providing more time for students to discover their reading lives but also shaping instruction to meet the needs of the diverse learners in her classroom By changing the structure of the day Cathy found she was better able to adjust the support she was providing students allowing time for whole class focus lessons conferences and opportunities to share ideas as well as reading from self selected texts using the strategies skills and understandings acquired in reader s workshop The focus lesson is the centerpiece of the workshop It is often tied to a read aloud and connected to learning from the previous day helping to build skills extend thinking and develop independence over time This thoroughly practical text offers numerous sample lessons questions for conferences and ideas for revamping guided reading groups It will help teachers tweak the mix of instructional components in their reading workshops and provoke school wide conversations about the place of guided reading in a complete literacy curriculum

Biologising the Social Sciences David Canter, David Turner, 2015-02-20 You can hardly open a paper or read an academic journal without some attempt to explain an aspect of human behaviour or experience by reference to neuroscience biological or evolutionary processes This biologising has had rather a free ride until now being generally accepted by the public at large However there is a growing number of scholars who are challenging the assumption that we are little more than our bodies and animal origins This volume brings together a review of these emerging critiques expressed by an international range of senior academics from across the social sciences Their arguments are firmly based in the empirical scientific tradition They show the lack of logic or evidence for many biologising claims as well as the damaging effects these biological assumptions can have on issues such as dealing with dyslexia or treating alcoholism This important book originally published as a special issue of Contemporary Social Science contributes to a crucial debate on what it means to be human This collection of articles by David Canter and his colleagues rigorously argued and richly informative are of immense importance It is astonishing that as Canter puts it in his brilliant overview of biologising trends there are those in the humanities who need to be reminded that human beings can talk and interact with each other generating cultures and societies that have an existence that cannot be reduced to their mere mechanical parts Professor Raymond Tallis FRCP FMedSci DLitt LittD in the Preface
