In the last decade, it's hard to drive a "penny" without hitting an RF or microwave technology. It's time to get up and running on these and no exceptions. Authored by a well-known expert in the industry, this unique book helps practicing engineers do just that by providing an easy-to-use, personal, step-by-step microwave circuit design "cookbook" for fast design results.

Using a fresh, easy-to-read style, The RF and Microwave Circuit Design Cookbook reveals practical, tested methods for designing and implementing a wide range of nonlinear RF and microwave circuits, including all types of mixers, frequency multipliers, and more. A special feature is a complete treatment of EBT nonlinear mixers, which offer the lowest intermodulation distortion of all types of mixers. This book also provides readers with hard-to-find information on creating both square-law and envelope detector detectors.

Stephen Maas is president of Nonlinear Technologies, Inc., California, a consulting company specializing in the design and analysis of nonlinear and time-varying RF/microwave components and systems. He earned his Ph.D. in electrical engineering from UCLA.
