Technology-Based Learning Michael J. Marquardt,Greg Kearsley,2024-11-01 Companies worldwide are recognizing the critical importance of harnessing the learning capabilities of people and technology in the workplace Technology Based Learning Maximizing Human Performance and Corporate Success shows how to capture and leverage this power through techniques of knowledge management This comprehensive overview examines the advantages and disadvantages of learning technologies and provides a guide for selecting costing and applying the various techniques Technology in the workplace has many overwhelming possibilities so many that they ve left many managers and HRD professionals confused and perplexed Let Marquardt and Kearsley show you how to bring technology under control to meet the needs of your company and your employees *Simulation in Aviation Training* Florian Jentsch,Michael Curtis,2017-05-15 Simulations have been a fixture of aviation training for many years Advances in simulator technology now enable modern flight simulation to mimic very closely the look and feel of real world flight operations In spite of this responsible researchers trainers and simulation developers should look beyond mere simulator fidelity to produce meaningful training outcomes Optimal simulation training development can unquestionably benefit from knowledge and understanding of past present and future research in this topic area As a result this volume of key writings is invaluable as a reference to help guide exploration of critical research in the field By providing a mix of classic articles that stand the test of time and recent writings that illuminate current issues this volume informs a broad range of topics relevant to simulation training in aviation Learning in Information-Rich Environments Delia Neuman,2011-03-31 The amount and range of information available to today s students and indeed to all learners is unprecedented Phrases like the information revolution the information or knowledge society and the knowledge economy underscore the truism that our society has been transformed by virtually instantaneous access to virtually unlimited information Thomas Friedman tells us that The World Is Flat and that we must devise new political and economic understandings based on the ceaseless communication of information from all corners of the world The Bush administration tells us that information relating to the war on terrorism is so critical that we must allow new kinds of surveillance to keep

society safe Teenage subscribers to social computing networks not only access information but enter text and video images and publish them widely becoming the first adolescents in history to be creators as well as consumers of vast quantities of information If the characteristics of the information age demand new conceptions of commerce national security and publishing among other things it is logical to assume that they carry implications for education as well In fact a good deal has been written over the last several decades about how education as a whole must transform its structure and curriculum to accommodate the possibilities offered by new technologies Far less has been written however about how the specific affordances of these technologies and the kinds of information they allow students to access and create relate to the central purpose of education learning What does learning mean in an information rich environment What are its characteristics What kinds of tasks should it involve What concepts strategies attitudes and skills do educators and students need to master if they are to learn effectively and efficiently in such an environment How can researchers theorists and practitioners foster the well founded and widespread development of such key elements of the learning process This book explores these questions and suggests some tentative answers Drawing from research and theory in three distinct but related fields learning theory instructional systems design and information studies it presents a way to think about learning that responds directly to the actualities of a world brimming with information The book is grounded in the work of such key figures in learning theory as Bransford and Anderson Krathwohl It draws on such theorists of instructional design as Gagne Mayer and Merrill From information studies it uses ideas from Buckland Marchionini and Wilson who is known for his pioneering work in information behavior that is the full range of information seeking and use The book breaks new ground in bringing together ideas that have run in parallel for years but whose relationship has not been fully explored *Resources in Education* ,1999
