Neuro-Symbolic Artificial Intelligence: The State of the Art Md Kamruzzaman Sarker,2022-01-15 Neuro symbolic AI is an emerging subfield of Artificial Intelligence that brings together two hitherto distinct approaches Neuro refers to the artificial neural networks prominent in machine learning symbolic refers to algorithmic processing on the level of meaningful symbols prominent in knowledge representation In the past these two fields of AI have been largely separate with very little crossover but the so called third wave of AI is now bringing them together This book Neuro Symbolic Artificial Intelligence The State of the Art provides an overview of this

development in AI The two approaches differ significantly in terms of their strengths and weaknesses and from a cognitive science perspective there is a question as to how a neural system can perform symbol manipulation and how the representational differences between these two approaches can be bridged The book presents 17 overview papers all by authors who have made significant contributions in the past few years and starting with a historic overview first seen in 2016 With just seven months elapsed from invitation to authors to final copy the book is as up to date as a published overview of this subject can be Based on the editors own desire to understand the current state of the art this book reflects the breadth and depth of the latest developments in neuro symbolic AI and will be of interest to students researchers and all those working in the field of Artificial Intelligence
