

One Way to Determine Where to Set the Alert

- Use the Inspector Alert in **CPM / CPS** mode to measure counts for 30 consecutive minutes.
- Record each reading.
- Add the readings and divide the sum by 30.
- Find the difference between each reading and the average.
- Square each of these differences (multiply it by itself).
- Total the squares of the differences and divide the sum by 29.
- Find the square root of this sum. This number is the standard deviation.
- Multiply the standard deviation by 4 and add this number to the average from step 3 above. Set the alert level to this number.
