Indexing and Retrieval of Non-Text Information Diane Rasmussen Neal, 2012-10-30. The scope of this volume will encompass a collection of research papers related to indexing and retrieval of online non-text information. In recent years, the Internet has seen an exponential increase in the number of documents placed online that are not in textual format. These documents appear in a variety of contexts such as user-generated content, sharing websites, social networking websites, etc., and formats including photographs, videos, recorded music, data visualizations, etc. The prevalence of these contexts and data formats presents a particularly challenging task to information indexing and retrieval research due to many difficulties such as assigning suitable semantic metadata, processing and extracting non-textual content automatically, and designing retrieval systems that speak in the native language of non-text documents.
