**RIVER PROCESSES** Andre Robert, 2014-05-12 Concise recent textbook emphasising sedimentary processes in alluvial channels Comprehensive treatment of flow bed sediment transport interactions Description and explanation of turbulent flow phenomena as well as flow and sediment dynamics at channel confluences Chapter on river channels aquatic habitats and the hyporheic zone *River Processes* André Robert, 2003 *River Processes* deals primarily with flow and sediment dynamics in alluvial channels It emphasises water flows basic principles and characterisation fluvial sediment processes of erosion and sediment transport bedforms that result from flow bed sediment interactions in sand and gravel flow and sedimentary processes in curved braided and confluent channels as well as aquatic habits *River Processes* provides a comprehensive synthesis of current knowledge about physical processes in alluvial channels with an emphasis on the recent work on flow bed sediment transport interactions It is intended primarily for undergraduate students interested in fluvial studies as part of physical geography earth sciences environmental sciences and ecology courses The textbook is fully illustrated throughout with line drawings and photographs **River Processes** André Robert (Associate professor), 2007

**RIVER PROCESSES** Andre Robert, 2014-05-12 Concise recent textbook emphasising sedimentary processes in alluvial channels Comprehensive treatment of flow bed sediment transport interactions Description and explanation of turbulent flow phenomena as well as flow and sediment dynamics at channel confluences Chapter on river channels aquatic habitats and the hyporheic zone **Fundamentals of Fluvial Geomorphology** Ro Charlton, 2007-11-12 *Fundamentals of Fluvial Geomorphology* will be an indispensable introductory text for first and second year undergraduates providing a clear understanding of how the fluvial system operates at different spatial and temporal scales **Fluvial Hydrodynamics** Subhasish Dey, 2014-08-22 The state of the art in fluvial hydrodynamics can be examined only through a careful exploration of the theoretical development and applied engineering technology The book is primarily focused since most up to date research findings in the field are presented on the research aspects that involve a comprehensive knowledge of sediment dynamics in turbulent flows It begins with the fundamentals of hydrodynamics and particle motion followed by turbulence characteristics related to sediment motion Then the sediment dynamics is analysed from a classical perspective by applying the mean bed shear approach and additionally incorporating a statistical description for the role of turbulence The work finally examines the local scour problems at hydraulic structures and scale models It is intended to design as a course textbook in graduate research level and a guide for the field engineers as well keeping up with modern technological developments Therefore as a simple prerequisite the background of the readers should have a basic knowledge in hydraulics in undergraduate level and an understanding of fundamentals of calculus **River Dynamics** Bruce L. Rhoads, 2020-05-07 A comprehensive overview of the geomorphological processes that shape rivers and that should be considered in river management Geomorphic Analysis of River Systems Kirstie A. Fryirs, Gary J. Brierley, 2012-09-26 Filling a niche in the

geomorphology teaching market this introductory book is built around a 12 week course in fluvial geomorphology Reading the landscape entails making sense of what a riverscape looks like how it works how it has evolved over time and how alterations to one part of a catchment may have secondary consequences elsewhere over different timeframes These place based field analyses are framed within their topographic climatic and environmental context Issues and principles presented in the first part of this book provide foundational understandings that underpin the approach to reading the landscape that is presented in the second half of the book In reading the landscape detective style investigations and interpretations are tied to theoretical and conceptual principles to generate catchment specific analyses of river character behaviour and evolution including responses to human disturbance This book has been constructed as an introductory text on river landscapes providing a bridge and or companion to quantitatively framed or modelled approaches to landscape analysis that are addressed elsewhere Key principles outlined in the book emphasise the importance of complexity contingency and emergence in interpreting the character behaviour and evolution of any given system The target audience is second and third year undergraduate students in geomorphology hydrology earth science and environmental science as well as river practitioners who use geomorphic understandings to guide scientific and or management applications The primary focus of Kirstie and Gary s research and teaching entails the use of geomorphic principles as a tool with which to develop coherent scientific understandings of river systems and the application of these understandings in management practice Kirstie and Gary are co developers of the River Styles Framework and Short Course that is widely used in river management decision making and training Additional resources for this book can be found at [www.wiley.com/go/fryirs\\_riversystems](http://www.wiley.com/go/fryirs_riversystems)

### **Fundamentals of Physical Geology** Sreepat

Jain,2013-10-18 Physical Geology is a vast subject and it is not possible to cover all aspects in one book This book does not invent the wheel but merely put together sets of updated but concise material on Physical Geology with lots of illustrations All illustrations are created by hand and give a real classroom feel to the book Students or readers can easily reproduce them by hand This is a book where a diagram says it all The book is divided into four parts The first part The Solar System and Cosmic Bodies deals with elements of our Solar System and the cosmic bodies around it like meteorites asteroids etc The second part The Earth Materials deals with Earth and its internal structure The third part The Hydrologic System is more exhaustive and deals with the hydrological system of the Earth including Weathering and Mass Wasting Streams Groundwater Karst Glaciers Oceans and Aeolian Processes and Landforms The fourth and the final part The Tectonic System deals with different aspects of Plate Tectonics Earthquakes and Volcanoes

### **River Science** David J. Gilvear,Malcolm T.

Greenwood,Martin C. Thoms,Paul J. Wood,2016-03-03 River Science is a rapidly developing interdisciplinary field at the interface of the natural sciences engineering and socio political sciences It recognises that the sustainable management of contemporary rivers will increasingly require new ways of characterising them to enable engagement with the diverse range of stakeholders This volume represents the outcome of research by many of the authors and their colleagues over the last 40 years and demonstrates the integral role that River Science now plays in underpinning our understanding of the functioning of natural ecosystems and how societal demands and historic changes have affected these systems The book will inform academics policy makers and society in general of the benefits of healthy functioning riverine systems and will increase awareness of the wide range of ecosystem goods and services they provide

### **A Living Landscape** Stijn Arnoldussen,2008

Today half the Netherlands is below sea level Because of this water management is of key importance when it comes to maintaining present day habitation of the Dutch low lands In prehistory however large parts of the Dutch landscape were highly dynamic due to ongoing fluvial sedimentation Vast deltaic areas with ceaseless river activity formed the backdrop against which prehistoric occupation took place Although such landscapes may seem inhospitable the often excellently preserved archaeological evidence indicates that people lived in these lowlands throughout prehistory This book describes why Bronze Age farmers were keen to settle here and how these prehistoric communities structured the landscape around their house sites at various scales Using a vast body of evidence from several large scale excavations in the Dutch river area the author reconstructs the changes in the cultural landscape over time Starting from the Middle Neolithic changing preferences for settlement site locations and changes in domestic architecture are traced in detail to the Iron Age However for proper understanding of the cultural landscape not only settlements but also graves and patterns of object deposition and their landscape characteristics are discussed By using evidence from over 50 major excavations yielding over 300 house plans this book contains by far the richest data set on Dutch Bronze Age settlements Most of these results have not

previously been published in English making this book of over 500 pages a true academic treasure for an international audience The in depth presentation of Bronze Age settlement sites as well as the critical discussion of models and premises current in later prehistoric settlement archaeology have an important relevance stretching beyond the Dutch lowland areas on which it is based The wealth of high quality Dutch data is presented as a synthesized yet well annotated narrative that rises above mere site interpretation even more so due to its landscape scale focus Therefore this book is a must have for those interested in later prehistoric cultural landscapes and settlement archaeology **Gravel Bed Rivers 6 H.**
