Sex And Longevity Sexuality Gender Reproduction Parenthood:

Sex and Longevity: Sexuality, Gender, Reproduction, Parenthood J.-M. Robine, T.B.L. Kirkwood, M. Allard, 2012-12-06 A central concept in the evolutionary theory of senescence is the idea that ageing results from life history trade offs. In particular, the disposable soma theory suggests that longevity is determined through the setting of longevity assurance mechanisms so as to provide an optimal compromise between investments in somatic maintenance including stress resistance and in reproduction. Comparative studies among mammalian species confirm that cells from long lived species appear to have a greater intrinsic capacity to withstand stresses than cells from short lived species. Childbearing at older ages has become increasingly common in modern societies because of demographic changes, medical progress, and personal choice. While the detrimental effects of late reproduction on infant mortality and genetic diseases have been well documented, little is known about the possible postponed detrimental effects of late parenting. *Health Expectations for Older Women* Sarah B. Laditka, 2014-06-11 Explore international trends in health and longevity with a special focus on older women. This essential book examines the latest research on life expectancy and active life expectancy, the number of years that women can expect to live free from major disability in developed and developing countries around the world. It also explores the policy implications of the contributors' findings. Here you will find a global study using data from the World Health Organization, a European study using data from OECD countries, and studies of women in the United Kingdom, Fiji, The Netherlands, Japan, Canada, and the United States. With contributions from demographers, economists, epidemiologists, gerontologists, medical statisticians, policy analysts, physicians, public health directors, and sociologists, *International Perspectives on Health Expectancies for Older Women* compares mortality and morbidity trends in various populations. In addition to reviewing the current literature on active life expectancy, this informative book looks at the distribution of total unimpaired and impaired life for several groups of older women defined by race, education, and marital history; gender differences in health profiles in The Netherlands; gender differences in life with and without six major diseases, including both morbid and mortal conditions in the United States; how mortality and morbidity patterns differ for Canadian women and men 45 years of age and older; focusing on risk factors and chronic conditions such as low income, low education, abnormal body mass index, lack of physical activity, smoking, cancer, diabetes, and arthritis; patterns of healthy life expectancy for older women around the globe; a comparison of the development and progression of physical disability in Japanese men and women; and more. **Modulating Aging and Longevity** S.I. Rattan, 2003-09-30 After decades of systematic collection of data describing age-related changes in organisms, organs, tissues, cells, and macromolecules, biogerontologists are now in a position to construct general principles of ageing and explore various possibilities of intervention using rational approaches. While not giving serious consideration to the claims made by charlatans, it cannot be ignored that several researchers are making genuine attempts to test and develop various means of intervention for the prevention and treatment of age-related diseases for regaining the functional abilities.

and for prolonging the lifespan of experimental organisms This book provides the most up to date information and a critical evaluation of a variety of approaches being tried for modulating aging and longevity including dietary supplementation with antioxidants vitamins and hormones genetic engineering life style alterations and hormesis through mild stress The goal of research on ageing is not to increase human longevity regardless of the consequences but to increase active longevity free from disability and functional dependence *Brain and Longevity* Caleb E. Finch, Jean-Marie Robine, 2013-12-21 In this third volume on longevity Fondation Ipsen has again collected the most recent results in research on genes and diet in the evolution of human longevity educational level and longevity cognitive impairment and survival at older age and other contributions The preponderance of relatively short compared to long lived organisms suggests that morphogenesis is easier to accomplish than is maintenance of soma whereas the broad range of longevity of organisms demonstrates that maintaining soma for extended periods of time is possible The underlying assumption of disposable soma theory of aging is that the expense of maintaining somatic cells depends on their contribution to the welfare of the germ cells *Handbook of Psychology, Developmental Psychology* Richard M. Lerner, M. Ann Easterbrooks, Jayanthi Mistry, 2003-03-04 Includes established theories and cutting edge developments Presents the work of an international group of experts Presents the nature origin implications and future course of major unresolved issues in the area *Handbook of the Biology of Aging* Edward J. Masoro, Steven N. Austad, 2011-04-28 The Handbook of the Biology of Aging Sixth Edition provides a comprehensive overview of the latest research findings in the biology of aging Intended as a summary for researchers it is also adopted as a high level textbook for graduate and upper level undergraduate courses The Sixth Edition is 20% larger than the Fifth Edition with 21 chapters summarizing the latest findings in research on the biology of aging The content of the work is virtually 100% new Though a selected few topics are similar to the Fifth Edition these chapters are authored by new contributors with new information The majority of the chapters are completely new in both content and authorship The Sixth Edition places greater emphasis and coverage on competing and complementary theories of aging broadening the discussion of conceptual issues Greater coverage of techniques used to study biological issues of aging include computer modeling gene profiling and demographic analyses Coverage of research on *Drosophila* is expanded from one chapter to four New chapters on mammalian models discuss aging in relation to skeletal muscles body fat and carbohydrate metabolism growth hormone and the human female reproductive system Additional new chapters summarize exciting research on stem cells and cancer dietary restriction and whether age related diseases are an integral part of aging The Handbook of the Biology of Aging Sixth Edition is part of the Handbooks on Aging series including Handbook of the Psychology of Aging and Handbook of Aging and the Social Sciences also in their 6th editions *Homo Novus - A Human Without Illusions* Ulrich J. Frey, Charlotte Störmer, Kai P. Willführ, 2010-08-24 Converging evidence from disciplines including sociobiology evolutionary psychology and human biology forces us to adopt a new idea of what it means to be a human As cherished concepts such as free will have

realism humans as creations crowning glory fall and our moral roots in ape group dynamics become clearer we have to take leave of many concepts that have been central to defining our humanness What emerges is a new human the homo novus a human being without illusions Leading authors from many different fields explore these issues by addressing a range of illusions and providing evidence for the need despite considerable reluctance to relinquish some of our most cherished ideas about ourselves

Oxford Handbook of Evolutionary Psychology Robin Ian MacDonald Dunbar, Louise Barrett, 2007 The Oxford Handbook of Evolutionary Psychology is the definitive comprehensive and authoritative text on this burgeoning field With contributions from over fifty experts in the field the range and depth of coverage is unequalled It will be an essential resource for students and researchers in psychology

Living to 100 and Beyond Timothy Harris, 2009 Designed to build upon recent Symposia on the same topic *Living to 100 and Beyond* explores the research that has focused on increasing life expectancies and the lifestyles of longer lived individuals It provides a basic understanding of the actuarial mathematics associated with life expectancies their calculation and their projection It also highlights the important issues facing society as populations age The book also provides a discussion of a host of products targeted for the aged It can thus serve as a reference source for anyone who is impacted by any aspect of this fascinating topic It concludes with an extensive bibliography for those who would like additional information

Grandmotherhood Eckart Voland, Athanasios Chasiotis, Wulf Schiefenhövel, 2005 Darwinian theory holds that a successful life is measured in terms of reproduction Bringing together work in anthropology psychology ethnography and the social sciences this study explores the evolutionary purpose and possibilities of female post generative life

Human Evolutionary Demography Oskar Burger, Ronald Lee, Rebecca Sear, 2024-06-14 Human evolutionary demography is an emerging field blending natural science with social science This edited volume provides a much needed interdisciplinary introduction to the field and highlights cutting edge research for interested readers and researchers in demography the evolutionary behavioural sciences biology and related disciplines By bridging the boundaries between social and biological sciences the volume stresses the importance of a unified understanding of both in order to grasp past and current demographic patterns Demographic traits and traits related to demographic outcomes including fertility and mortality rates marriage parental care menopause and cooperative behavior are subject to evolutionary processes Bringing an understanding of evolution into demography therefore incorporates valuable insights into this field just as knowledge of demography is key to understanding evolutionary processes By asking questions about old patterns from a new perspective the volume composed of contributions from established and early career academics demonstrates that a combination of social science research and evolutionary theory offers holistic understandings and approaches that benefit both fields Human Evolutionary Demography introduces an emerging field in an accessible style It is suitable for graduate courses in demography as well as upper level undergraduates Its range of research is sure to be of interest to academics working on demographic topics anthropologists sociologists demographers natural scientists working

on evolutionary processes and disciplines which cross cut natural and social science such as evolutionary psychology human behavioral ecology cultural evolution and evolutionary medicine As an accessible introduction it should interest readers whether or not they are currently familiar with human evolutionary demography **Searching for Longevity**

Determinants: Luisa Salaris,2009 The scientific debate on longevity and its determinants is lively and involves researchers from different some people live longer than others is not an easy task Variables that are shown to be significant for longer survival in certain populations are not always relevant to individuals of other populations Recently researchers have identified in Sardinia the Blue Zone BZ thus denominated due to the significant number of cases of centenarians recorded as well as a low sex ratio value A village located in this area was selected for the carrying out of a more detailed analysis at individual level and socio demographic determinants of longevity were examined A family reconstructed database was created using a multi source approach Historical data was therefore used to study today s population establishing a unique bridge between historical demography and the current level of longevity The study focused on survival of newborns in the selected village during a period of 50 years from 1866 to 1915 and also took into consideration information on related family members Each individual included in the database was followed from birth to death as he she went through marriage and family formation Complete survival of all newborns was observed until the present Based on careful review of the existing literature the empirical model considered factors such as sex differential the contribution of familial transmission both in terms of genes biological and shared environment and the role played by environment operationalised considering early life conditions Concepts were organized into a life course approach for survival analysis The analysis of the data enabled to the estimation of mortality trajectories which in turn confirmed the exceptional longevity of the population understudy and in particular of males The investigation of differential survival among members of the same community brought to light the relevance of certain familial variables on survival which are not exclusively genetic The results achieved open the way to further studies An Introduction to Education Hasan Arslan,2018-07-26 This volume offers a set of strategies and
