Reading The Shape Of Nature Comparative Zoology At The Agassiz Museum:

Reading the Shape of Nature Mary P. Winsor, 2011-05-04 Reading the Shape of Nature vividly recounts the turbulent early history of the Museum of Comparative Zoology at Harvard and the contrasting careers of its founder Louis Agassiz and his son Alexander Through the story of this institution and the individuals who formed it Mary P Winsor explores the conflicting forces that shaped systematics in the second half of the nineteenth century Debates over the philosophical foundations of classification details of taxonomic research the young institution's financial struggles and the personalities of the men most deeply involved are all brought to life In 1859 Louis Agassiz established the Museum of Comparative Zoology to house research on the ideal types that he believed were embodied in all living forms Agassiz's vision arose from his insistence that the order inherent in the diversity of life reflected divine creation not organic evolution But the mortar of the new museum had scarcely dried when Darwin's Origin was published By Louis Agassiz's death in 1873 even his former students including his son Alexander had defected to the evolutionist camp Alexander a self made millionaire succeeded his father as director and introduced a significantly different agenda for the museum To trace Louis and Alexander's arguments and the style of science they established at the museum Winsor uses many fascinating examples that even zoologists may find unfamiliar The locus of all this activity the museum building itself tells its own story through a wonderful series of archival photographs

Defining Species John S. Wilkins, 2009 This book was listed as a CHOICE Outstanding Academic Title in 2011 Defining Species A Sourcebook from Antiquity to Today provides excerpts and commentary on the definition of species from source material ranging from the Greeks through the middle ages to the modern era It demonstrates that the logical meaning of species is in direct contrast to the use of kind terms and concepts in natural history and biology and that the myth that biologists or natural historians were ever essentialists about kinds is mistaken On Her Own Terms Barbara R. Stein, 2001-10-18 Publisher Fact Sheet The life of an explorer amateur naturalist philanthropist pioneer in the field of science

Romantic Biology, 1890-1945 Maurizio Esposito, 2015-10-06 In this book Esposito presents a historiography of organicist and holistic thought through an examination of the work of leading biologists from Britain and America He shows how this work relates to earlier Romantic tradition and sets it within the wider context of the history and philosophy of the life sciences

Delia's Tears Molly Rogers, David W. Blight, 2010-05-25 M N O P R S T U V W Y Z Studies in history and museums Peter E. Rider, 1994-01-01 The authors of this volume attempt to describe the relationship between history as a field of study and museums as vehicles for the presentation of historical discourse The development of history museums the way in which exhibits are created the manner in which historians function in a museum setting and the issues connected with the treatment of the history of specific sectors of our population are the themes addressed Published in English

Information and Intrigue Colin B. Burke, 2014-05-16 An account of Herbert Field's quest for a new way of organizing information and how information systems are produced by ideology as well as technology In Information and Intrigue Colin

Burke tells the story of one man's plan to revolutionize the world's science information systems and how science itself became enmeshed with ideology and the institutions of modern liberalism. In the 1890s the idealistic American Herbert Haviland Field established the Concilium Bibliographicum, a Switzerland-based science information service that sent millions of index cards to American and European scientists. Field's radical new idea was to index major ideas rather than books or documents. In his struggle to create and maintain his system, Field became entangled with nationalistic struggles over the control of science information, the new system of American philanthropy powered by millionaires, the politics of an emerging American professional science, and in the efforts of another information visionary, Paul Otlet, to create a pre-digital worldwide database for all subjects. World War I shuttered the Concilium, and postwar efforts to revive it failed. Field himself died in the influenza epidemic of 1918. Burke carries the story into the next generation, however, describing the astonishingly varied career of Field's son Noel, who became a diplomat, an information source for Soviet intelligence, as was his friend Alger Hiss, a secret World War II informant for Allen Dulles, and a prisoner of Stalin. Along the way, Burke touches on a range of topics, including the new entrepreneurial university, Soviet espionage in America, and further efforts to classify knowledge.

Science and the Social Good John P. Herron, 2009-11-25. Using biographies of three natural scientists: geologist Clarence King, forester Robert Marshall, and biologist Rachel Carson, *Science and the Social Good* investigates the links between nature's scientific study and social improvement. **Biologists and the Promise of American Life** Philip J. Pauly, 2018-06-05. Explorers, evolutionists, eugenicists, sexologists, and high school biology teachers all have contributed to the prominence of the biological sciences in American life. In this book, Philip Pauly weaves their stories together into a fascinating history of biology in America over the last two hundred years. Beginning with the return of the Lewis and Clark expedition in 1806, botanists and zoologists identified science with national culture, linking their work to continental imperialism and the creation of an industrial republic. Pauly examines this nineteenth-century movement in local scientific communities, with national reach: the partnership of Asa Gray and Louis Agassiz at Harvard University; the excitement of work at the Smithsonian Institution and the Geological Survey; and disputes at the Agriculture Department over the continent's future. He then describes the establishment of biology as an academic discipline in the late nineteenth century and the retreat of life scientists from the problems of American nature. The early twentieth century, however, witnessed a new burst of public-oriented activity among biologists. Here, Pauly chronicles such topics as the introduction of biology into high school curricula; the efforts of eugenicists to alter the breeding of Americans; and the influence of sexual biology on Americans' most private lives. Throughout much of American history, Pauly argues, life scientists linked their study of nature with a desire to culture to use intelligence and craft to improve American plants, animals, and humans. They often disagreed and frequently overreached, but they sought to build a nation whose people would be prosperous, humane, secular, and liberal. Life scientists were significant participants in efforts to realize what Progressive Era oracle Herbert Croly called the promise of American life.

Pauly tells their story in its entirety and explains why now in a society that is rapidly returning to a complex ethnic mix similar to the one that existed for a hundred years prior to the Cold War it is important to reconnect with the progressive creators of American secular culture *The Fate of Anatomical Collections* Dr Rina Knoeff, Prof Dr Robert

Zwijnenberg, 2015-03-28 This volume explores the changing status of anatomical collections from the early modern period to date It is argued that anatomical and pathological collections are medically relevant for future research and are important in the history of medicine the cultural history of the body and the history of the institutions to which they belong In considering the fate of anatomical collections and the importance of keeper s decisions with respect to collections this volume will make an important methodological contribution to the study of collections and to discussions on how to preserve universities academic heritage
