River Ecology:

River Ecology Brian A. Whitton, B. A. Whitton, 1975 River Ecology Michael A. Mallin, 2024-01-18 This accessible textbook takes a broad approach to river ecology covering the basics but going beyond by including topics that are often overlooked such as blackwater streams and rivers tidal creek ecosystems and reservoir limnology There is significant emphasis on anthropogenic impacts **River Ecology and Management** Robert Naiman, Robert E. Bilby, 2001-02-16 As the vast expanses of natural forests and the great populations of salmonids are harvested to support a rapidly expanding human population the need to understand streams as ecological systems and to manage them effectively becomes increasingly urgent The unfortunate legacy of such natural resource exploitation is well documented For several decades the Pacific coastal ecoregion of North America has served as a natural laboratory for scientific and managerial advancements in stream ecology and much has been learned about how to better integrate ecological processes and characteristics with a human dominated environment These in sightful but hard learned ecological and social lessons are the subject of this book Integrating land and rivers as interactive components of ecosystems and watersheds has provided the ecological sciences with important theoretical foundations Even though scientific disciplines have begun to integrate land based processes with streams and rivers the institutions and processes charged with managing these systems have not done so successfully As a result many of the watersheds of the Pacific coastal ecoregion no longer support natural settings for environmental processes or the valuable natural resources those processes create An important role for scientists educators and decision makers is to make the integration between ecology and consumptive uses more widely understood as well as useful for effective management River Ecology and Man Ray T. Oglesby, Clarence A. Carlson, James A. McCann, 2013-09-17 Environmental Sciences River Ecology and Man covers papers on the subject of river ecology The book provides a geomorphic and chemical overview of rivers and discusses the zoological description of a river The text also describes plant ecology in flowing water man's impact on the Columbia river and water quality management of the Delaware river The uses of rivers and the human's impact on the rivers of Columbia Illinois Nile Thames and Danube are also considered The book further tackles regulated discharge and the stream environment morphometric changes and sedimentation suspended solids The text also looks into the effects of pesticides and industrial wastes on surface water use the effects of radionuclides in river systems and the multiple use of river systems Environmental scientists geologists civil engineers and scientists involved in the study of the natural resources wildlife and fisheries **Colorado River Ecology and Dam Management** National Research Council, Division on Earth and Life Studies, Commission on Geosciences, Environment and Resources, Water Science and Technology Board, Committee to Review the Glen Canyon Environmental Studies, 1991-02-01 This book contains 11 papers that review the extant information about the Colorado River from an ecosystem perspective and serve as the basis for discussion of the use of ecosystem earth science information for river management and dam operations It also contains a

synopsis of the committee's findings and recommendations to the Bureau of Reclamation as the agency seeks to change its direction to the management of natural resources

The Missouri River Ecosystem National Research Council, Division on Earth and Life Studies, Water Science and Technology Board, Committee on Missouri River Ecosystem Science, 2002-08-22 The Missouri River Ecosystem Exploring the Prospects for Recovery resulted from a study conducted at the request of the U S Environmental Protection Agency and the U S Army Corps of Engineers The nation's longest river the Missouri River and its floodplain ecosystem experienced substantial environmental and hydrologic changes during the twentieth century The context of Missouri River dam and reservoir system management is marked by sharp differences between stakeholders regarding the river's proper management regime The management agencies have been challenged to determine the appropriate balance between these competing interests This Water Science and Technology Board report reviews the ecological state of the river and floodplain ecosystem scientific research of the ecosystem and the prospects for implementing an adaptive management approach all with a view toward helping move beyond ongoing scientific and other differences The report notes that continued ecological degradation of the ecosystem is certain unless some portion of pre settlement river flows and processes were restored The report also includes recommendations to enhance scientific knowledge through carefully planned and monitored river management actions and the enactment of a Missouri River Protection and Recovery Act

The State of the Colorado River Ecosystem in Grand Canyon Steven Gloss, Jeffrey E. Lovich, Theodore S. Melis, 2005

Assessing the Ecological Integrity of Running Waters M. Jungwirth, S. Muhar, S. Schmutz, 2000-06-30 The

assessment of the ecological integrity of running waters is a prerequisite to an understanding of the effects of human alterations. The evaluation of degradation processes provides key information on how to avoid further negative impacts. The success of future conservation mitigation and restoration activities will rely on sound assessment methodologies and their ecological relevance and applicability. Assessment methodologies are therefore an integral part of sustainable river management. This book synthesizes and discusses state of the art experiences in assessment methodologies. Including the latest knowledge on structures, processes and functions of running waters as a fundamental basis for developing adequate assessment methods, the book focuses on method development, application and in particular on integrated assessment methods. This book is directed at scientists and managers with the aim of more effective preservation, restoration and maintenance of the ecological integrity of running water ecosystems.

River Dynamics and Integrated River Management Zhao-Yin Wang, Joseph H.W. Lee, Charles S. Melching, 2014-09-24. River Dynamics and Integrated River Management provides comprehensive information on rivers for integrated management, including natural processes, stresses resulting from human activities and restoration of various parts of the river basin, including the watershed, mountain streams, alluvial rivers, estuaries and natural and man-made lakes. Essential concepts, traditional and modern, such as river patterns, step pool systems, vegetation, erosion, charts, habitat diversity and flushing times of bays are clearly defined, physically and explained with figures and pictures. Detailed mathematics and rigorous analyses are avoided so as to facilitate a holistic view of the subject of integrated river management. Researchers can easily familiarize themselves with the science of river management in its widest sense with the impressive pictures and examples in this book. Dr Zhaoyin Wang is a professor at the Department of Hydraulic Engineering, Tsinghua University, China. Dr Joseph H W Lee is a Chair Professor at the Department of Civil and Environmental Engineering, The Hong Kong University of Science and Technology, China. Dr Charles S Melching is a Professor at the College of Engineering, Marquette University, Milwaukee, WI, USA.
