Experimental Hydraulics: Methods, Instrumentation, Data Processing and Management Marian Muste,Dennis A. Lyn,David Admiraal,Robert Ettema,Vladimir Nikora,Marcelo H. Garcia,2017-07-28 This is the first volume of a two volume guide to designing conducting and interpreting laboratory and field experiments in a broad range of topics associated with hydraulic engineering Specific guidance is provided on methods and instruments currently used in experimental hydraulics with emphasis on new and emerging measurement technologies and methods of analysis Additionally this book offers a concise outline of essential background theory underscoring the intrinsic connection between theory and experiments This book is much needed as experimental hydraulicians have had to refer to guidance scattered in scientific papers or specialized monographs on essential aspects of laboratory and fieldwork

practice The book is the result of the first substantial effort in the community of hydraulic engineering to describe in one place all the components of experimental hydraulics Included is the work of a team of more than 45 professional experimentalists who explore innovative approaches to the vast array of experiments of differing complexity encountered by today's hydraulic engineer from laboratory to field from simple but well conceived to complex and well instrumented The style of this book is intentionally succinct making frequent use of convenient summaries tables and examples to present information All researchers practitioners and students conducting or evaluating experiments in hydraulics will find this book useful

Practical Channel Hydraulics, 2nd edition Donald W. Knight, Caroline Hazlewood, Rob Lamb, Paul G. Samuels, Koji Shiono, 2018-03-05

Practical Channel Hydraulics is a technical guide for estimating flood water levels in rivers using the innovative software known as the Conveyance and Afflux Estimation System CES AES The stand alone software is freely available at HR Wallingford's website www.riverconveyance.net The conveyance engine has also been embedded within industry standard river modelling software such as InfoWorks RS and Flood Modeller Pro This 2nd Edition has been greatly expanded through the addition of Chapters 6-8 which now supply the background to the Shiono and Knight Method SKM upon which the CES AES is largely based With the need to estimate river levels more accurately computational methods are now frequently embedded in flood risk management procedures as for example in ISO 18320 Determination of the stage discharge relationship in which both the SKM and CES feature The CES AES incorporates five main components A Roughness Adviser A Conveyance Generator an Uncertainty Estimator a Backwater Module and an Afflux Estimator The SKM provides an alternative approach solving the governing equation analytically or numerically using Excel or with the short FORTRAN program provided Special attention is paid to calculating the distributions of boundary shear stress distributions in channels of different shape and to appropriate formulations for resistance and drag forces including those on trees in floodplains Worked examples are given for flows in a wide range of channel types size shape cover sinuosity ranging from small scale laboratory flumes $Q = 2.0 \text{ l/s}$ to European rivers $2,000 \text{ m}^3/\text{s}$ and large scale world rivers $23,000 \text{ m}^3/\text{s}$ a 10^7 range in discharge Sites from rivers in the UK France China New Zealand and Ecuador are considered Topics are introduced initially at a simplified level and get progressively more complex in later chapters This book is intended for post graduate level students and practising engineers or hydrologists engaged in flood risk management as well as those who may simply just wish to learn more about modelling flows in rivers

Free Surface Flows and Transport Processes Monika B. Kalinowska, Magdalena Maria Mrokowska, Paweł Mariusz Rowiński, 2018-01-28

This book contains the written thoroughly reviewed versions of both invited lectures and regular presentations given at the 36th International School of Hydraulics held at Jachranka in Poland on May 23-26 2017 The contributions cover recent findings in the areas of mathematical modeling as well as experimental investigations related to free surface flows and pollution sediment and heat transport processes in rivers Better understanding of environmental flows requires cognition of physical chemical and biological attributes of

flowing water and therefore hydraulic research becomes strongly interdisciplinary field of science The authors also realize that fundamental knowledge of environmental hydraulics problems is absolutely essential for planning and design of systems to manage water resources Nowadays the readers face a rapid development of hydraulic research due to a boom in the computer sciences and measurement techniques and this is what this book is about Eminent world leading experts in this field and young researchers from sixteen countries from all over the world contributed to this book
