Extinction

Douglas H. Erwin, 2015-03-22 Some 250 million years ago the earth suffered the greatest biological crisis in its history Around 95 percent of all living species died out a global catastrophe far greater than the dinosaurs demise 185 million years later How this happened remains a mystery But there are many competing theories Some blame huge volcanic eruptions that covered an area as large as the continental United States others argue for sudden changes in ocean levels and chemistry including burps of methane gas and still others cite the impact of an extraterrestrial object similar to what caused the dinosaurs extinction Extinction is a paleontological mystery story Here the world's foremost authority on the subject provides a fascinating overview of the evidence for and against a whole host of hypotheses concerning this cataclysmic event that unfolded at the end of the Permian After setting the scene Erwin introduces the suite of possible perpetrators and the types of evidence paleontologists seek He then unveils the actual evidence moving from China where much of the best evidence is found to a look at extinction in the oceans to the extraordinary fossil animals of the Karoo Desert of South Africa Erwin reviews the evidence for each of the hypotheses before presenting his own view of what happened Although full recovery took tens of millions of years this most massive of mass extinctions was a powerful creative force setting the stage for the development of the world as we know it today In a new preface Douglas Erwin assesses developments in the field since the book's initial publication

Facing Global Environmental Change Hans Günter Brauch, Navnita Chadha Behera, Patricia Kameri-Mbote, John Grin, Úrsula Oswald Spring, Béchir Chourou, Czesław Mesjasz, Heinz Krummenacher, 2009-06-04 The year 2007 could perhaps accurately be described as the year when climate change finally received the attention that this challenge deserves globally Much of the information and knowledge that was created in this field during the year was the result of the findings of the Fourth session Report AR4 of the Intergovernmental Panel on Climate Change IPCC which were disseminated on a large scale and reported extensively by the media This was the result not only of a heightened interest on the part of the public on various aspects of climate change but also because the IPCC itself proactively attempted to spread the findings of its AR4 to the public at large The interest generated on the scientific realities of climate change was

further enhanced by the award of the Nobel Peace Prize to the IPCC and former Vice President of the US Al Gore By taking this decision in favour of a leader who has done a great deal to create awareness on climate change and a body that assesses all scientific aspects of climate change and disseminates the result of its findings the Norwegian Nobel Committee has clearly drawn the link between climate change and peace in the world
