The Cultures of Markets Janelle Knox-Hayes, 2016-06-24 Anthropogenic climate change poses a grave threat to societies around the world. The greenhouse gases that generate climate change are produced by virtually every sector of every economy. The predominant response of governments around the world is to mitigate climate change through the capping and trading of emissions. This book explores the establishment of emissions trading as a form of environmental market-based governance in the United States, Europe, Australia, South Korea, Japan, and China. The book conceptualizes markets as institutions and analyzes them as a system of climate governance. To this end, it argues that international efforts to promulgate markets run up against local cultures of markets that shape economic practices and knowledge to different degrees. While the global agenda under the United Nations Framework Convention on Climate Change has sought to develop similar systems to enable interconnected and synchronized emissions reductions, each of the cases analyzed here has produced different results. The markets and climate policies established reflect the syncretic impact of socio-political and cultural context on the institutional transfer of markets. Each country expresses a varying degree of ease or unease with the establishment of markets as systems of climate governance. Exploration of market adaptation adds new insights to theories of varieties of capitalism. The book also examines the material implications of emissions markets on the environment and climatic systems. In sum, the study finds that cultures of markets present a substantial challenge to a universalist prescription for resolving climate change and highlights issues at the interface of political and economic governance in different political economies. This includes issues of citizen state and industry participation and the materiality of economic and financial productivity.

The Institutional Dynamics of Culture, Volumes I and II Perri Six, 2018-12-20 These two volumes present the most important recent developments in the institutional theory of culture and demonstrate their practical applications. Sometimes called grid group analysis or cultural theory, they derive from the work of Durkheim in the 1880s and 1900s and develop the insights of the anthropologist Mary Douglas and her followers from the 1960s on. First redefined within social and cultural anthropology, the theory's influence is shown in recent years to have permeated all the main disciplines of social science with substantial implications for politics, history, business, work, and organizations, the environment, technology, and risk and crime and consumption. Today, the institutional theory of culture now rivals the rational choice, Weberian, and postmodern outlooks in influence across the social sciences.
