Marine Conservation and International Law Sarah Louise Lothian, 2022-07-22 This book provides a blueprint for an International Legally Binding Instrument ILBI for the conservation and sustainable use of marine biodiversity beyond national jurisdiction BBNJ The development of an ILBI could signify a pivotal turning point in the law of the sea by addressing regulatory governance and institutional gaps and deficiencies in the existing international law framework for BBNJ This book analyses the essential components an ILBI will require to effectively conserve and sustainably use BBNJ focusing on marine genetic resources areabased management tools environmental impact assessments capacity building and marine technology transfer It investigates potential areas of compromise as the success of an ILBI will rely upon the support of a powerful bloc of maritime States principally the United States the United Kingdom Russia the Netherlands France and

Japan The participation of major maritime powers will be critical as it is their nationals corporations and flag vessels that have the financial and technical wherewithal to undertake activities beyond national jurisdiction This bloc of States has historically been the strongest proponent of the Grotian doctrine of freedom of the seas as it aligns with their predominant interest to preserve navigational freedom for their merchant and military fleets Accordingly this book assesses the extent to which the Grotian doctrine continues to exert influence on the development of the law of the sea and the development of an ILBI Providing a comprehensive overview of this important development in international law this book will be of interest to students lecturers and academics of law of the sea international environmental law and biodiversity law Advances in Marine Biology ,2009-07-09 Advances in Marine Biology was first published in 1963 Now edited by A J Southward Marine Biological Association UK P A Tyler Southampton Oceanography Association UK C M Young Harbor Branch Oceanographic Institution USA and L A Fuiman University of Texas USA the serial publishes in depth and up to date reviews on a wide range of topics which will appeal to postgraduates and researchers in marine biology fisheries science ecology zoology oceanography Eclectic volumes in the series are supplemented by thematic volumes on such topics as The Biology of Calanoid Copepods Rated Number 1 in the highly competitive category of Marine and Freshwater Biology by ISI in the 2000 ISI journals citation report Maintains an Impact Factor of 3.37 the highest in the field Series features over 35 years of coverage of research **Proceeding A Regional Conference on "Academic Co-operation in BIMP-EAGA: Prospects and Challenges"** Abdul Maulud Yusof,Dg. Aquatic Species of Europe. Distribution, Impacts and Management Erkki Leppäkoski, Stephan Gollasch, Sergej Olenin, 2013-06-29 The global scale of alien species invasions is becoming more and more evident in the beginning of the new millennium. Though the problem of biological invasions became a rapidly growing research area, there are large gaps still both geographically and thematically to be filled in the near future. This book is the first attempt to provide an overall picture of aquatic species invasions in Europe. Its geographical scope stretches from Irish waters in the west to Volga River and the Caspian Sea in the east and from Mediterranean in the south up to the Arctic coast of Europe. Not all parts of the continent could be equally covered as in some countries species invasions are not studied yet. The book tends to represent the array of all major European aquatic systems on the broadest geographical and ecological scope possible from fully saline seas, semi-enclosed brackish water bodies and coastal lagoons to freshwater lakes, major river systems and waterways. The key objectives include the present status and impacts caused by non-native aquatic species in European waters. Please note that lengthy species lists submitted for publication and additional information were put on the Internet as the electronic version of these tables benefits from computer-assisted search for data: <http://www.ku.lt/nemo/EuroAquaInvaders.htm>. Altogether more than 100 scientists from 24 countries have joined to synthesize the available information on bioinvasions. However, the book does not claim to be fully comprehensive.

Blue Genes Brian Harvey, 2013-06-17 The advance of genetic sciences has led to a blue revolution in the way we use aquatic biodiversity. By 2020 the world will be eating almost as much farmed as wild fish. Marine bacteria could yield the cure for cancer and deep-sea bacteria may be exploited to gobble up oil spills. Science is moving ahead at a staggering speed and the demand for genetic resources is growing rapidly yet governance and policy lag far behind. This groundbreaking work is the first to look at the ownership, governance and trade in aquatic genetic resources. *Blue Genes* describes the growing demand for aquatic genetic resources and the desperate need to fill the policy vacuum about the management and conservation of aquatic biodiversity which would help create a foundation for rules dictating access to and use of aquatic genetic resources. Special attention is paid to indigenous and local people having the right to access these resources and their role in managing and conserving aquatic biodiversity. The book concludes with policy recommendations specifically tailored to aquatic resources with the use of six case studies from four continents to illustrate key issues.

Reef Fishes of Hong Kong Yvonne Sadovy, Andrew S. Cornish, 2000-01-01 This book documents the first comprehensive survey of reef fishes ever undertaken in Hong Kong. It includes descriptions and colour photographs of over 320 fish species, a third of which have never before been recorded here.
