Marine Seismic Source:

The Marine Seismic Source G.E. Parkes, L. Hatton, 2013-04-17 This book is about marine seismic sources their history their physical principles and their deconvolution It is particularly accented towards the physical aspects rather than the mathematical principles of signature generation in water as it is these aspects which the authors have found to be somewhat neglected A huge amount of research has been carried out by both commercial and academic institutions over the years and the resulting literature is a little daunting to say the least In spite of this the subject is intrinsically very simple and relies on a very few fundamental physical principles a somewhat larger number of heuristic principles and a refreshingly small amount of blunderbuss mathematics As such it is still one of those subjects in which the gifted practical engineer reigns supreme and from which many of the important advances have originated In Chapter 1 of the book the underlying physics and concepts are discussed including pressure and wave propagation bubble motion virtual images and the factors determining choice of source In marine reflection seismology almost all of the seismic data acquired currently is done with either the airgun or the watergun which rely on the expulsion of air and water respectively to generate acoustic energy As a consequence the discussion in this chapter is geared towards these two sources as is much of the rest of the book

Geophysical Applications of Sound Leighton Myles Watson, 2020 Acoustic waves are generated by a wide range of natural and artificial geophysical phenomena By studying the acoustic signals insight can be gained about the fundamental processes governing these phenomena In this thesis I examine acoustic signals from two different sources volcanic eruptions and pneumatic marine seismic sources In Part I of this thesis I consider acoustic waves generated by volcanic activity Volcanoes are prodigious sources of low frequency acoustic waves which are termed infrasound as the signals are predominantly at frequencies below human hearing Harmonic infrasound signals are observed at open vent volcanoes and in Chapter 2 I develop a numerical model to demonstrate that these signals can be explained by acoustic resonance of the crater In Chapter 3 I apply this model to the 2015 eruption of Villarrica Chile and show that the lava lake rose in the crater prior to the paroxysmal eruption These two chapters illustrate the utility of monitoring infrasound resonant modes at open vent volcanoes and may aid in forecasting future eruptive activity The majority of volcano infrasound studies assume linear wave propagation However volcanic eruptions are violent phenomena and there is increasing evidence of nonlinear wave phenomena such as shock waves during eruptive activity In Chapter 4 I perform nonlinear computational aeroacoustic simulations of volcanic eruptions to explore the

effect of nonlinear wave propagation and demonstrate that assuming linearity can result in overestimation of erupted fluxes for eruptions with high supersonic exit velocities In Part II of this thesis I study pneumatic marine seismic sources which are the predominant source used in marine seismic surveys Pneumatic seismic sources are broadband sources that generate both geophysically useful low frequencies and high frequency noise that is harmful to marine life In Chapter 5 I explore controls on the initial peak of a pneumatic seismic source signature The initial peak is generated by the initial release of highly pressurized air into the water and is responsible for generating high frequency noise that can be environmentally damaging In Chapter 6 I present numerical simulations of a novel pneumatic seismic source called the Tuned Pulse Source and demonstrate that this source will generate increased low frequency content In Chapter 7 I digress slightly to compare marine seismic signals with the low frequency calls of fin whales and speculate on possible mechanisms of low frequency sound generation in whales Encoding Techniques for Marine Seismic Sources & Their Applications Moritz Benjamin
