*The Politics and Economics of Park Management* Terry Lee Anderson, Alexander James, 2001 The Politics and Economics of Park Management examines national protected area systems in both developed and developing countries that have made a transformation from fortress parks to a sustainable use model The contributors park management academics and members of

nongovernmental organizations contend that successful institutional change in protected area systems involves not only the adoption of appropriate legal and regulatory regimes covering sustainable use but also the development of an informal culture of sustainable resource use among all of a park's stakeholders. While this latter requirement is often difficult to achieve, the contributors show how these informal attitudes may evolve over time both within the management structure of a park agency and the community of resource users. The case studies cited represent examples of successful institutional change demonstrating both financial and conservation benefits to protected area agencies that should serve as model for managing parks today.

**Institutions, Regulatory Styles, Society and Environmental Governance in China** Carlos Wing-Hung Lo, Shui-Yan Tang, 2013-08-15 During the past three decades of rapid industrial growth China has suffered from devastating environmental degradation. Most scholarly and popular publications have painted a rather pessimistic picture about the worrisome trend. Yet a somewhat more optimistic view has emerged in the past decade given the Chinese government's increased commitment to fighting industrial pollution, the public's increased concerns regarding the adverse effects of pollution, and domestic and international civil society's increased involvement in promoting environmental protection in China. Drawing on the authors' extensive research on Guangdong Province and a few large cities in other provinces, this book provides an in-depth study on China's environmental governance and regulatory enforcement in the past two decades. Section 1 examines various institutional constraints for environmental regulation enforcement at the local level and how governance reform efforts in the past decade have contributed to the lessening of those constraints. Section 2 draws on data derived from surveys and interviews conducted in multiple cities and times; it examines the dominant regulatory enforcement styles of local environmental protection bureaus and how these styles vary across different regions and over time. Section 3 examines how various stakeholders—the general public, environmental groups, government entities, and corporations—affect the environmental governance process. Overall, the book presents a cautiously optimistic view on the evolution of environmental governance in China. While highlighting many political, institutional, social, and economic constraints, it also documents many changes that have taken place, including reform efforts from within the government, administrative system, increasingly societal concerns and actions, and changing attitudes among corporate executives, potentially paving the way for more effective environmental governance in the future.

Government Vs. Environment Donald Leal, Roger E. Meiners, 2002 Many Americans today view the government as the savior of the environment. When it comes to protecting land, fish, and wildlife, the common response is to let government do it. The contributors to *Government Versus the Environment* encourage us to consider government in a different light by looking at clear instances of public programs that foster environmental destruction. They provide an in-depth look at how the political process can adversely impact the quality of our environment and argue that the government's track record in managing natural resources has been and continues to be abysmal. The case studies in *Government Versus the Environment* will cause readers to think twice about

the all too familiar calls for more government for the sake of the environment

**The Common Law and the Environment** Roger E. Meiners, Andrew P. Morriss, 2000 Since 1970 when the Clean Air Act was passed and the Environmental Protection Agency was created the primary means for addressing environmental problems in the U S has been through comprehensive federal statutes and detailed regulations Evaluating almost three decades of experience with the Clean Air Act Superfund the Clean Water Act the Endangered Species Act and other major federal environmental statutes the contributors to this volume question the effectiveness and impact of the legal regime that created these regulations While most studies of environmental policy paint a picture of improvement through government initiatives these essays argue the contrary Pointing to Cleveland s burning river the death of Lake Erie smog in Los Angeles and Love Canal the contributors demonstrate that command and control regulation of the environment has not delivered the great improvements in environmental quality as promised The Common Law and the Environment offers principles for a new approach to protecting the environment and looks to evidence of the successes of alternative legal systems to address significant problems

**Liability and Environment** Lucas Bergkamp, 2001-01-01 This book provides an analysis of civil liability for environmental harm in an inter and transnational context It covers both liability of private parties and state liability under international and EC law and discusses national law developments in this area It explores in particular the relationship between public environmental law and private liability law Applying an instrumental approach to legal instruments it aims to redefine the role of liability in this heavily regulated area from the Preface

Altered Environments Jeffrey Pompe, 2012-11-26 An illustrated history of how natural and human forces have shaped the development of a coastal community The constant assault of natural forces make fragile barrier islands some of the most rapidly changing locations in the world but human activities have had enormous impact on these islands as well In Altered Environments Jeffrey and Kathleen Pompe explore the complex interactions between nature and human habitation on the resilient Outer Banks of North Carolina The Pompes employ modern and historical photographs and maps to illustrate the geographic and ecologic changes that have taken place on the Outer Banks evaluating efforts to preserve these lands and also meet the evolving needs of a growing population The Pompes examine the various forces that have created an environment so very different from the Outer Banks of only a few decades ago The defining event in the reshaping of the islands for expanded development was the dune construction project of the 1930s when the Civilian Conservation Corps constructed a wall of self sustaining dunes along 125 miles of Outer Banks shoreline in an effort to stave off beach erosion This event created a historical demarcation in conservation efforts and heralded the beginning of a period of rapid economic development for the Outer Banks The construction project reshaped the islands geography to accomplish perceived economic

advantages and prepared the Outer Banks for the last half of the twentieth century when tourists increasingly visited this shore bringing corresponding developments in their wake The dune restoration project is just one of the Pompeis examples of how human actions have altered the islands to meet the demands of a growing number of visitors and residents While *Altered Environments* focuses on the Outer Banks the narrative also considers social environmental and economic issues that are relevant to much of the seashore Most coastal communities face similar problems such as natural disasters and shoreline erosion and in recent decades rapid population growth has exacerbated many conservation problems Real estate developments the fisheries industry tourism climate change and oil exploration all come under scrutiny in this investigation Using the Outer Banks as a case study to frame a host of environmental challenges faced along the Atlantic seaboard today the Pompeis provide a valuable commentary on the historical context of these concerns and offer some insightful solutions that allow for sustainable communities

*Conservation Reconsidered* Charles T. Rubin, 2000 The prominent contributors in *Conservation Reconsidered* establish a fundamentally original view of the conservation movement and the impact of public policy on nature This collection of essays articulate the belief that the thinkers and actors who helped develop the conservation movement notably John Muir Theodore Roosevelt Gifford Pinchot and Aldo Leopold have been seriously misunderstood by scholars who have analyzed them in the context of contemporary environmental debates Conservationism the contributors argue was a diverse movement dealing with difficult questions about the relationship of human beings to nature in a modern liberal democratic state The essays place conservationism within the framework of 19th century American political thinkers including Darwin Emerson Thoreau and Olmsted and they illuminate perennial questions about citizenship and our place in the natural world *Conservation Reconsidered* takes a new look at what is problematic about the legacy of American conservationism and explores worthy alternatives to the dominant environmentalist thinking of today

*Evolving Property Rights in Marine Fisheries* Donald Leal, 2005 This book examines the development of property rights in marine fisheries and asks whether the obstacles to their continued development cannot be more easily overcome The contributed chapters generally focus on the consequences of a lack of property rights of commercial and small time fishers globally National governments have recognized that the absence of such rights coupled with the technological advances in commercial fishing have resulted in widespread economic and environmental problems e g overfishing bycatching highgrading increased physical dangers and lower profits The most significant solution to these problems and the predominate concern of this book is the institution of Individual Transferable Quotas ITQs also known as Individual Fishing Quotas IFQs These are national and global policies public and private sector managed allocations of the amount of various species of fish at certain qualities can be harvested at particular times by fishers

*The Technology of Property Rights* Terry Lee Anderson, Peter Jensen Hill, 2001 *The Technology of Property Rights* combines the understanding of institutions and institutional change with a discussion of the latest technologies and their influence on the measurement and monitoring

of property rights The contributors analyze specific applications for fisheries whales water quality various pollutants as well as other pressing environmental issues No other work brings together an economic understanding of environmental issues with technological expertise in the way this volume does

**Energy Abstracts for Policy Analysis** ,1982 **A Burning Issue** Robert Henry Nelson,2000 Created in the early 20th century to provide scientific management of the nation s forests the U S Forest Service was for many years regarded as a model agency in the federal government The author contends that this reputation is undeserved and the Forest Service s performance today is unacceptable Not only has scientific management proven impossible in practice it is also objectionable in principle Furthermore the author argues that the Forest Service lacks a coherent vision and prefers to sponsor only fashionable environmental solutions most recently ecosystem management Describing its history and failures the author advocates replacing the service with a decentralized system to manage the protection of national forests

**New Holy Wars** Robert H. Nelson,2010-11-01 **Ensuring Greater Yellowstone's Future** Susan Gail Clark,2008-10-01 Drawing on extensive conservation experience in the greater Yellowstone region Susan G Clark outlines the leadership and policy issues associated with managing greater Yellowstone s natural resources and assesses the successes and failures of those who have worked there toward sustainability over the past 40 years

**Defending Illusions** Allan K. Fitzsimmons,1999 Fitzsimmons examines the science philosophy and law of ecosystems management and shows how efforts to make federal protection of ecosystems the centerpiece of national environmental policy are driven by religious veneration of Mother Earth wrapped in a veil of weak science
