**That's Maths** Peter Lynch,2016-10-14 From atom bombs to rebounding slinkies open your eyes to the

mathematical magic in the everyday Mathematics isn't just for academics and scientists a fact meteorologist and blogger Peter Lynch has spent the past several years proving through his Irish Times newspaper column and blog That's Maths Here he shows how maths is all around us with chapters on the beautiful equations behind designing a good concert venue predicting the stock market and modelling the atom bomb as well as playful meditations on everything from coin stacking to cartography If you left school thinking maths was boring think again     [Gazette - Australian Mathematical Society](#)

Australian Mathematical Society,2006     [Data Clustering in C++](#) Guojun Gan,2011-03-28 Data clustering is a highly interdisciplinary field the goal of which is to divide a set of objects into homogeneous groups such that objects in the same group are similar and objects in different groups are quite distinct Thousands of theoretical papers and a number of books on data clustering have been published over the past 50 years However few books exist to teach people how to implement data clustering algorithms This book was written for anyone who wants to implement or improve their data clustering algorithms Using object oriented design and programming techniques Data Clustering in C exploits the commonalities of all data clustering algorithms to create a flexible set of reusable classes that simplifies the implementation of any data clustering algorithm Readers can follow the development of the base data clustering classes and several popular data clustering algorithms Additional topics such as data pre processing data visualization cluster visualization and cluster interpretation are briefly covered This book is divided into three parts Data Clustering and C Preliminaries A review of basic concepts of data clustering the unified modeling language object oriented programming in C and design patterns A C Data Clustering Framework The development of data clustering base classes Data Clustering Algorithms The implementation of several popular data clustering algorithms A key to learning a clustering algorithm is to implement and experiment the clustering algorithm Complete listings of classes examples unit test cases and GNU configuration files are included in the appendices of this book as well as in the downloadable resources The only requirements to compile the code are a modern C compiler and the Boost C libraries     [American Book Publishing Record](#) ,2005     **PSTricks** Herbert Voss,2010-01-01 Grafiken und

**American Scientist** ,1942      Homotopical Algebraic Geometry II: Geometric Stacks and Applications Bertrand Toën,Gabriele Vezzosi,2008 This is the second part of a series of papers called HAG devoted to developing the foundations of homotopical algebraic geometry The authors start by defining and studying generalizations of standard notions of linear algebra in an abstract monoidal model category such as derivations tale and smooth morphisms flat and projective modules etc They then use their theory of stacks over model categories to define a general notion of geometric stack over a base symmetric monoidal model category C and prove that this notion satisfies the expected properties

Differential Geometry, Lie Groups and Symmetric Spaces over General Base Fields and Rings Wolfgang Bertram,2008 The aim of this work is to lay the foundations of differential geometry and Lie theory over the general class of topological base fields and rings for which a differential calculus has been developed without any restriction on the dimension or on the characteristic Two basic features distinguish the author s approach from the classical real finite or infinite dimensional theory namely the interpretation of tangent and jet functors as functors of scalar extensions and the introduction of multilinear bundles and multilinear connections which generalize the concept of vector bundles and linear connections

Needle Decompositions in Riemannian Geometry Bo'az Klartag,2017-09-25 The localization technique from convex geometry is generalized to the setting of Riemannian manifolds whose Ricci curvature is

bounded from below In a nutshell the author s method is based on the following observation When the Ricci curvature is non negative log concave measures are obtained when conditioning the Riemannian volume measure with respect to a geodesic foliation that is orthogonal to the level sets of a Lipschitz function The Monge mass transfer problem plays an important role in the author s analysis
