Topology and Combinatorial Group Theory Paul Latiolais,2006-11-14 This book demonstrates the lively interaction between algebraic topology very low dimensional topology and combinatorial group theory Many of the ideas presented are still in their infancy and it is hoped that the work here will spur others to new and exciting developments Among the many techniques disussed are the use of obstruction groups to distinguish certain exact sequences and several graph theoretic

techniques with applications to the theory of groups *Twistor Theory for Riemannian Symmetric Spaces* Francis E. Burstall, John H. Rawnsley, 2006-11-14 In this monograph on twistor theory and its applications to harmonic map theory a central theme is the interplay between the complex homogeneous geometry of flag manifolds and the real homogeneous geometry of symmetric spaces In particular flag manifolds are shown to arise as twistor spaces of Riemannian symmetric spaces Applications of this theory include a complete classification of stable harmonic 2 spheres in Riemannian symmetric spaces and a Bäcklund transform for harmonic 2 spheres in Lie groups which in many cases provides a factorisation theorem for such spheres as well as gap phenomena The main methods used are those of homogeneous geometry and Lie theory together with some algebraic geometry of Riemann surfaces The work addresses differential geometers especially those with interests in minimal surfaces and homogeneous manifolds **Groups of Self-Equivalences and Related Topics** Renzo A. Piccinini, 2006-11-14 Since the subject of Groups of Self Equivalences was first discussed in 1958 in a paper of Barcuss and Barratt a good deal of progress has been achieved This is reviewed in this volume first by a long survey article and a presentation of 17 open problems together with a bibliography of the subject and by a further 14 original research articles

Algebraic Geometry and Complex Analysis Enrique Ramirez de Arellano, 2006-11-14 **Recursion Theory Week** Klaus Ambos-Spies, Gert H. Müller, Gerald E. Sacks, 2006-11-14 These proceedings contain research and survey papers from many subfields of recursion theory with emphasis on degree theory in particular the development of frameworks for current techniques in this field Other topics covered include computational complexity theory generalized recursion theory proof theoretic questions in recursion theory and recursive mathematics New Integrals Peter S.
