Uncertainty Theories and Multisensor Data Fusion Alain Appriou, 2014-07-09 Addressing recent challenges and developments in this growing field Multisensor Data Fusion Uncertainty Theory first discusses basic questions such as Why and when is multiple sensor fusion necessary How can the available measurements be characterized in such a case What is the purpose and the specificity of information fusion processing in multiple sensor systems Considering the different uncertainty formalisms a set of coherent operators corresponding to the different steps of a complete fusion process is then developed in order to meet the requirements identified in the first part of the book

Mathematics of Data Fusion I.R. Goodman, R.P. Mahler, Hung T. Nguyen, 2013-03-14 Data fusion or information fusion are names which have been primarily assigned to military oriented problems In military applications typical data fusion problems are multisensor multitarget detection object identification tracking threat assessment mission assessment and mission planning among many others However it is clear that the basic

underlying concepts underlying such fusion procedures can often be used in nonmilitary applications as well The purpose of this book is twofold First to point out present gaps in the way data fusion problems are conceptually treated Second to address this issue by exhibiting mathematical tools which treat combination of evidence in the presence of uncertainty in a more systematic and comprehensive way These techniques are based essentially on two novel ideas relating to probability theory the newly developed fields of random set theory and conditional and relational event algebra This volume is intended to be both an update on research progress on data fusion and an introduction to potentially powerful new techniques fuzzy logic random set theory and conditional and relational event algebra Audience This volume can be used as a reference book for researchers and practitioners in data fusion or expert systems theory or for graduate students as text for a research seminar or graduate level course
