Human Herds: The Theory of Dual Morality (Second Edition, Unabridged) Stephen Martin Fritz,2019-05-14 Let us imagine that somewhere in present day South America a nation exists as the United States was constituted in 1789 George Washington is its president and Thomas Jefferson its secretary of state It is a nation that allows only white males to vote and its president cabinet officials and many of its citizens own slaves If the America of 1789 existed right now what would we think of it Would it be right to invade it in order to liberate its people Would we consider a complete embargo of it until it changed its ways Would it be a pariah among nations Or would we recognize and cooperate with it declaring its president and secretary of state political geniuses Maybe we would just do nothing and trust that in 100 or so years it will straighten itself out What would be the correct way to think of such a nation and its leaders Three hundred years ago if a woman was raped and became pregnant we d kill the rapist and spare the baby Today we spare the rapist and kill the baby One hundred years ago only heterosexual marriages were legal Today political leaders around the world are celebrating gay relationships How and why does our moral outlook change in such matters By the time you are done reading this book you will have concrete answers to these questions and many more This is a learned thoroughly researched study and dazzlingly bright The

AB Bookman's Weekly ,1992 *Machine Dreams* Philip Mirowski,2002 This is the first cross over book into the history of science written by an historian of economics It shows how history of technology can be integrated with the history of economic ideas The analysis combines Cold War history with the history of postwar economics in America and later elsewhere revealing that the Pax Americana had much to do with abstruse and formal doctrines such as linear programming and game theory It links the literature on cyborg to economics an element missing in literature to date The treatment further calls into question the idea that economics has been immune to postmodern currents arguing that neoclassical economics has participated in the deconstruction of the integral self Finally it argues for an alliance of computational and institutional themes and challenges the widespread impression that there is nothing else besides American neoclassical economic theory left standing after the demise of Marxism Mathematics, Science, and Postclassical Theory Barbara Herrnstein Smith,1997-03-04 Mathematics Science and Postclassical Theory is a unique collection of essays dealing with the intersections between science and mathematics and the radical reconceptions of knowledge language proof truth and reality currently emerging from poststructuralist literary theory constructivist history and sociology of science and related work in contemporary philosophy Featuring a distinguished group of international contributors this volume engages themes and issues central to current theoretical debates in virtually all disciplines agency causality determinacy representation and the social dynamics of knowledge In a substantive introductory essay the editors explain the notion of postclassical theory and discuss the significance of ideas such as emergence and undecidability in current work in and on science and mathematics Other essays include a witty examination of the relations among mathematical thinking writing and the technologies of virtual reality an essay that reconstructs the conceptual practices that led to a crucial mathematical discovery or construction in the 19th century a discussion of the implications of Bohr s complementarity principle for classical ideas of reality an examination of scientific laboratories as hybrid communities of humans and nonhumans an analysis of metaphors of control purpose and necessity in contemporary biology an exploration of truth and lies and the play of words and numbers in Shakespeare Frege Wittgenstein and Beckett and a final chapter on recent engagements or nonengagements between rationalist realist philosophy of science and contemporary science studies Contributors Malcolm Ashmore Michel Callon Owen Flanagan John Law Susan Oyama Andrew Pickering Arkady Plotnitsky Brian Rotman Barbara Herrnstein Smith John Vignaux Smyth E Roy Weintraub **On the Metaphysics of Experimental Physics** K.
