Strengths-Based Teaching and Learning in Mathematics Beth McCord Kobett, Karen S. Karp, 2020-02-27 This book is a game changer Strengths Based Teaching and Learning in Mathematics 5 Teaching Turnarounds for Grades K 6 goes beyond simply providing information by sharing a pathway for changing practice Focusing on our students strengths should be routine and can be lost in the day to day teaching demands A teacher using these approaches can change the trajectory of students lives forever All teachers need this resource Connie S Schrock Emporia State University National Council of Supervisors of Mathematics President 2017 2019 NEW COVID RESOURCES ADDED A Parent s Toolkit to Strengths Based Learning in Math is now available on the book s companion website to support families engaged in math learning at home This toolkit provides a variety of home based activities and games for families to engage in together Your game plan for unlocking mathematics by focusing on students strengths We often evaluate student thinking and their work from a deficit point of view particularly in mathematics where many teachers have been taught that their role is to diagnose and eradicate students misconceptions But what if instead of focusing on what

students don't know or haven't mastered we identify their mathematical strengths and build next instructional steps on students' points of power. Beth McCord Kobett and Karen S. Karp answer this question and others by highlighting five key teaching turnarounds for improving students' mathematics learning: identify teaching strengths, discover and leverage students' strengths, design instruction from a strengths-based perspective, help students identify their points of power, and promote strengths in the school community and at home. Each chapter provides opportunities to stop and consider current practice, reflect, and transfer practice while also sharing downloadable resources, activities, and tools. Examples of student work within Grades K-6, real teachers' notes and reflections for discussion. It's time to turn around our approach to mathematics instruction and deficit thinking and nurture each student's mathematical strengths by emphasizing what makes them each unique and powerful.

Select the right task at the right time for the right phase of learning. It could happen in the morning during homework review. Or perhaps it happens when listening to students as they struggle through a challenging problem. Or maybe even after class when planning a lesson. At some point the question arises: How do I influence students' learning? What's going to generate that light bulb, aha moment of understanding? In this sequel to the megawatt best seller *Visible Learning for Mathematics*, John Almarode, Douglas Fisher, Nancy Frey, John Hattie, and Kateri Thunder help you answer that question by showing how Visible Learning strategies look in action in the mathematics classroom. Walk in the shoes of middle school teachers as they engage in the 200 micro-decisions per minute needed to balance the strategies, tasks, and assessments seminal to high-impact mathematics instruction. Using grade-level examples and a decision-making matrix, you'll learn to articulate clear learning intentions and success criteria at surface, deep, and transfer levels. Employ evidence to

guide students along the path of becoming metacognitive and self directed mathematics achievers Use formative assessments to track what students understand what they don't and why Select the right task for the conceptual procedural or application emphasis you want ensuring the task is for the right phase of learning Adjust the difficulty and complexity of any task to meet the needs of all learners It's not only what works but when Exemplary lessons video clips and online resources help you leverage the most effective teaching practices at the most effective time to meet the surface deep and transfer learning needs of every student *Leading Change in Your School* Douglas B.
