T. Jørgensen,Keri A. Kornelson,Karen L. Shuman,2011 The authors study the moments of equilibrium measures for iterated function systems IFSs and draw connections to operator theory Their main object of study is the infinite matrix which encodes all the moment data of a Borel measure on mathbb R d or mathbb C To encode the salient features of a given IFS into precise moment data they establish an interdependence between IFS equilibrium measures the encoding of the sequence of moments of these measures into operators and a new correspondence between the IFS moments and this family of operators in Hilbert space For a given IFS the authors aim is to establish a functorial correspondence in such a way that the geometric transformations of the IFS turn into transformations of moment matrices or rather transformations of the operators that are associated with them *Encyclopaedia of Mathematics (set)* Michiel Hazewinkel,1994-02-28 The Encyclopaedia of Mathematics is the most up to date authoritative and comprehensive English language work of reference in mathematics which exists today With over 7 000 articles from A integral to Zygmund Class of Functions supplemented with a wealth of complementary information and an index volume providing thorough cross referencing of entries of related interest the Encyclopaedia of Mathematics offers an immediate source of reference to mathematical definitions concepts explanations surveys examples terminology and methods The depth and breadth of content and the straightforward careful presentation of the information with the emphasis on accessibility makes the Encyclopaedia of Mathematics an immensely useful tool for all mathematicians and other scientists who use or are confronted by mathematics in their work The Enclyclopaedia of Mathematics provides without doubt a reference source of mathematical knowledge which is unsurpassed in value and usefulness It can be highly recommended for use in libraries of
