COMMUNICATION NETWORKS AND SERVICE MANAGEMENT IN THE ERA OF ARTIFICIAL INTELLIGENCE AND MACHINE LEARNING Discover the impact that new technologies are having on communication systems with this up to date and one stop resource Communication Networks and Service Management in the Era of Artificial Intelligence and Machine Learning delivers a comprehensive overview of the impact of artificial intelligence AI and machine learning ML on service

and network management Beginning with a fulsome description of ML and AI the book moves on to discuss management models architectures and frameworks The authors also explore how AI and ML can be used in service management functions like the generation of workload profiles service provisioning and more The book includes a handpicked selection of applications and case studies as well as a treatment of emerging technologies the authors predict could have a significant impact on network and service management in the future Statistical analysis and data mining are also discussed particularly with respect to how they allow for an improvement of the management and security of IT systems and networks Readers will also enjoy topics like A thorough introduction to network and service management machine learning and artificial intelligence An exploration of artificial intelligence and machine learning for management models including autonomic management policy based management intent based management and network virtualization based management Discussions of AI and ML for architectures and frameworks including cloud systems software defined networks 5G and 6G networks and Edge Fog networks An examination of AI and ML for service management including the automatic generation of workload profiles using unsupervised learning Perfect for information and communications technology educators Communication Networks and Service Management in the Era of Artificial Intelligence and Machine Learning will also earn a place in the libraries of engineers and professionals who seek a structured reference on how the emergence of artificial intelligence and machine learning techniques is affecting service and network management

Critical Information Infrastructures Maitland Hyslop, 2007-09-05 Resilience is an increasingly important concept and quality in today's world It is particularly important in the area of Critical Infrastructures It is crucial in the area of Critical Information Infrastructure This is because since the year 2000 man has been dependent on information and telecommunications systems for survival particularly in the Organization for Economic Cooperation and Development OECD countries and because all other Critical Infrastructures depend upon to a greater or lesser extent Critical Information Infrastructure Until probably the late 1980s it would be fair to say that the defense of individual nation states depended upon a mixture of political will and armed might The fall of the Berlin Wall may have effectively ended the Cold War and with it a bipolar world but it brought globalization and a multipolar digital world in its wake Simply put a number of power vacuums were created and these have yet to be fully filled and settled In this New World many changes were afoot These changes include the increasing irrelevance of nation states in federated structures and the export of democracy on the back of globalization One of the biggest changes though is the use of digital technology by the OECD countries This is on such a scale that these countries have become both dependent upon information technology and as individual states largely irrelevant to the new global electronic economy 1 This adaptation of Maslow's hierarchy of needs is attributed to KPMG
