Alexander,2018-12-01 Evidence and logic are lacking in many areas of public

debate today on hot button issues ranging from dietary fat to vaccination In *Science Under Attack* Dr Alexander shows how science is being abused sidelined or ignored making it difficult or impossible for the public to form a reasoned opinion about important issues Readers will learn why science is becoming more corrupt and also how it is being abused for political and economic gain support of activism or the propping up of religious beliefs To illustrate how science is being ignored and abused the author examines six different issues and the way they are currently discussed evolution dietary fat climate change vaccination GMO crops and continental drift In his research he has gone back to the original source wherever possible rather than quoting second hand sources adding a degree of accuracy and nuance often missing The controversial assertion that science does not support the conventional wisdom on climate change should be of particular interest Alexander shows that the scientific evidence for a substantial human contribution to climate change is actually flimsy and he demonstrates the fallacy of comparing the strong link between smoking and lung cancer to the much weaker connection between human activity and global warming **Credit and Financial Management** ,1923 **Handbook of Hazards and Disaster Risk**

Reduction Ben Wisner,JC Gaillard,Ilan Kelman,2012-03-29 The Handbook provides a comprehensive statement and reference point for hazard and disaster research policy making and practice in an international and multi disciplinary context

Is the End of the World Near? Ron Miller,2011-08-01 At one time or another just about everyone has talked about the end of the world But what does this phrase really mean Does it mean the end of the human race The end of planet Earth The end of our Sun and solar system And if the world were to actually end how and when would it happen People have been asking these questions for thousands of years Many religious prophets have predicted the end of the world Science fiction writers have created lots of end of the world stories Scientists too talk about natural events that could destroy human life or planet Earth Some end of the world events are dramatic Imagine an asteroid slamming into Earth creating a massive explosion Other scenarios don t involve a single catastrophic event For example global warming is changing the planet and threatening people plants and animals It might not bring about the end of the world but it might change life as we know it In this book we ll look at these scenarios and many more everything from Mayan prophecy to nuclear disaster to the end of the universe We ll find out which scenarios to ignore and which ones to really worry about
