functional role of seed banks in agricultural and natural ecosystems The book is aimed at advanced level students and researchers in the fields of seed science seed ecology and plant ecology **Seeds** M. ed FENNER,1992 *Seed Ecology* M.W. Fenner,2012-12-06 This book is about the regeneration of plants from seed under field conditions It attempts to give a reasonably balanced overview of the many aspects of this broad topic The first chapter introduces some general ideas about reproduction in plants Subsequent chapters deal with the early stages in the life of a plant from ovule to established seedling in a more or less chronological order The final chapter shows how the data on regeneration requirements of different species can be used to explain a number of important characteristics of whole plant communities The study of the ecological aspects of reproduction by seed touches on a range of issues of current interest in biology A discussion of seed size and number involves a consideration of the concepts of resource allocation life cycles and strategies The interactions between plants and animals seen in pollination seed dispersal and predation provide excellent material for the study of coevolution Investigations on regeneration from seed have greatly our understanding of the causes and maintenance of species added to diversity The reader will find that virtually all the experiments and field observations described in this book are conceptually very simple Many of them merely required numerous careful measurements Seed Fate J. E. Lambert,P. E. Hulme,S. B. Vander Wall,2005 This book presents current knowledge of seed fate in both natural and human disturbed landscapes from various regions of the world Habitats considered range from mountain and arid deserts in the temperate zone to savanna and lowland rainforests in tropical regions of the world Particular attention is paid to plant diversity conservation when seed removal is affected by factors such as hunting habitat fragmentation or intensive logging Contributors include leading scientists involved in research on seed ecology and on animal plant relationships from the perspective of both primary and secondary seed dispersal and predation **Dormancy and Low Growth States in Microbial Disease** Anthony R. M. Coates,2003-06-02 All cellular life forms can exist in replicating and non replicating states Organisms replicate only when the conditions are beneficial and when not replicating they concentrate on survival of these environmental stresses Many bacteria harmful to humans survive the period of infection in a low growth state This 2003 book addresses the basic science of microbial dormancy and low growth states putting this in the context of human medicine Such fundamental topics as bacterial growth and non growth culturability and viability are covered as well as survival of the host s immune response and inter bacterial signalling Following this introduction more medically focused topics are discussed namely antibiotic resistance arising during stationary phase biofilms the bacteria which cause gastric ulcers and tuberculosis as the classic persistent bacterial infection This book will interest graduate students and researchers in medical microbiology immunology and infectious disease medicine who are interested in bacterial dormancy in relation to disease *Seed Development and Germination* Jaime Kigel,2017-11-01 This text is intended for plant physiologists molecular biologists biochemists biotechnologists geneticists horticulturalists agronomists and botanists and upper level undergraduate and graduate

students in these disciplines It integrates advances in the diverse and rapidly expanding field of seed science from ecological and demographic aspects of seed production dispersal and germination to the molecular biology of seed development The book offers a broad multidisciplinary approach that covers both theoretical and applied knowledge **Seeds Handbook** Babasaheb B. Desai, 2004-04-22 Revised and expanded throughout this latest edition of the bestselling Seeds Handbook Biology Production Processing and Storage includes valuable information on all areas of seed biology production and processing The author one of the most respected and prolific scientists in the field identifies current developments in seed testing and c Principles of Seed Science and Technology Lawrence O. Copeland, Miller F. McDonald, 2012-12-06 This Third Edition of Principles of Seed Science and Technology like the first two editions is written for the advanced undergraduate student or lay person who desires an introduction to the science and technology of seeds The first eight chapters present the seed as a biological system and cover its origin development composition function and sometimes nonfunction performance and ultimate deterioration The last seven chapters present the fundamentals of how seeds are produced conditioned evaluated and distributed in our modern agricultural society A new chapter on seed enhancement has been added to reflect the significant advancements made in the last 10 years on new physiological and molecular biology techniques to further enhance seed performance Because of the fundamental importance of seeds to both agriculture and to all of society we have taken great care to present the science and technology of seeds with the respect and feeling this study deserves We hope that this feeling will be communicated to our readers Furthermore we have attempted to present information in a straight forward easy to read manner that will be easily understood by students and lay persons alike Special care has been taken to address both current state of the art as well as future trends in seed technology We believe this Third Edition represents a new level in presenting information that appeals to advanced undergraduate students as well as to those desiring more fundamental information on seed form and function At the same time it continues to have the strengths of the first two editions in its readability as well as its comprehensive coverage of the broader area of seed science and technology
