## **Seeking New Horizons A Perceptual Approach To Geographic Education:**

**Seeking New Horizons** Henry W. Castner,1990-04-01 Castner developed this innovative perspective on geographic education through observation of the Orff Schulwerk technique of music education This pedagogical method provides an organizational framework within which the primitive elements and concepts of music can be introduced experienced and explored and auditory discrimination developed The process of improvisation is the focal point of the Schulwerk Castner suggests that the numerous educational benefits of improvisation can be obtained in geographic education by the process of mapping He defines mapping as graphic description analysis and presentation in a problem solving context After more than two decades of research in cartographic communication Castner concludes that success in examining and analysing landscapes and images representative of them is dependant upon developed skills in visual discrimination *Seeking New Horizons* describes a rationale for linking basic visual discriminations to their logical extensions in the concepts that are fundamental to geographic thinking thus providing challenging approaches to developing spatial awareness graphic literacy and geographic understanding In addition Castner identifies eight basic concepts which would allow students and teachers to work interactively with spatial information and over time with increasingly complex and sophisticated tools and at increasingly abstract levels of generalization

*Seeking New Horizons* Henry W. Castner,1990 Geography is often introduced to schoolchildren by having them look at maps as formal conventional objects rather than as tools for analysing and communicating ideas about geographic relationships But how effective is this Recent research in cartographic communication and map perception suggests that geographic literacy is generally quite low In *Seeking New Horizons* Henry Castner proposes another approach our focus should shift from maps to the ways in which geographic information and the relationships within it can be isolated and communicated graphically With the adoption of a perspective which focuses on the user children would be encouraged to discover the concepts underlying geographic thinking in its most elemental and natural forms

Learning and Teaching with Maps Patrick Wiegand,2006-01-31 A comprehensive and authoritative account

of how primary school children and teachers can use maps to enhance learning and deepen understanding of this essential skill. It includes all aspects of map use such as reading and interpreting maps and using maps to find the way, covering maps of all scales including globes and atlases. The text is extensively illustrated with examples including maps made by children themselves using conventional materials as well as computer software. A particular feature of the book is the integration of digital and conventional mapping and Internet and CD ROM cartography together with simple applications of Geographic Information Systems GIS appropriate to the needs of children right through primary and secondary education. This book will be of great use to all primary teachers and subject teachers in secondary school as well as non specialist geography teachers and will enable children to use all types of maps in new compelling and thoughtful ways. *The Child's World* Margaret Robertson, Rodney Gerber, 2000

What skills are required to help children navigate these very different spaces? How? *Indian Geography* Anu Kapur, 1998
