Selected Perspectives on Platforms in E-Commerce Ecosystems Tobias Wulfert, 2024-08-02 Digital platforms hold significant economic value enriching various industry sectors While they are pivotal in driving value creation and capture it is not solely their technological prowess that underpins their economic significance Rather their effectiveness lies in their integration within business ecosystems In this study Tobias Wulfert examines digital platforms in the context of e commerce through five lenses Enterprise architecture Boundary resources Application lifecycle Dynamic capabilities Value creation This analysis focuses on different e commerce platform types developing an architectural framework and a taxonomy for classification The author

also delineates e commerce ecosystem architectures emphasizing the role of platforms as central components and the involvement of peripheral ecosystem participants He explores boundary resources as crucial interfaces between platforms and ecosystem participants He further suggests a reference procedure model for the management of these boundary resources Furthermore he delves into the dynamic capabilities necessary for effective ecosystem orchestration identifying configurations of dynamic capabilities that can confer sustainable competitive advantages

Analog Layout Generation for Performance and Manufacturability Koen Lampaert, Georges Gielen, Willy M.C. Sansen, 2013-04-18 Analog integrated circuits are very important as interfaces between the digital parts of integrated electronic systems and the outside world A large portion of the effort involved in designing these circuits is spent in the layout phase Whereas the physical design of digital circuits is automated to a large extent the layout of analog circuits is still a manual time consuming and error prone task This is mainly due to the continuous nature of analog signals which causes analog circuit performance to be very sensitive to layout parasitics The parasitic elements associated with interconnect wires cause loading and coupling effects that degrade the frequency behaviour and the noise performance of analog circuits Device mismatch and thermal effects put a fundamental limit on the achievable accuracy of circuits For successful automation of analog layout advanced place and route tools that can handle these critical parasitics are required In the past automatic analog layout tools tried to optimize the layout without quantifying the performance degradation introduced by layout parasitics Therefore it was not guaranteed that the resulting layout met the specifications and one or more layout iterations could be needed In *Analog Layout Generation for Performance and Manufacturability* the authors propose a performance driven layout strategy to overcome this problem In this methodology the layout tools are driven by performance constraints such that the final layout with parasitic effects still satisfies the specifications of the circuit The performance degradation associated with an intermediate layout solution is evaluated at runtime using predetermined sensitivities In contrast with other performance driven layout methodologies the tools proposed in this book operate directly on the performance constraints without an intermediate parasitic constraint generation step This approach makes a complete and sensible trade off between the different layout alternatives possible at runtime and therefore eliminates the possible feedback route between constraint derivation placement and layout extraction Besides its influence on the performance layout also has a profound impact on the yield and testability of an analog circuit In *Analog Layout Generation for Performance and Manufacturability* the authors outline a new criterion to quantify the detectability of a fault and combine this with a yield model to evaluate the testability of an integrated circuit layout They then integrate this technique with their performance driven routing algorithm to produce layouts that have optimal manufacturability while still meeting their performance specifications *Analog Layout Generation for Performance and Manufacturability* will be of interest to analog engineers researchers and students
