Climate Activism in the 21st Century Dianne Rahm, 2023-08-28 The ravages of climate change emerged as a central issue in the 21st century. In the U.S., the political divide over climate change and how to confront it expanded. While Democrats became increasingly determined to join international efforts led by the United Nations to combat climate change, Republicans largely balked. The country embraced climate leadership when led by Obama and Biden but when led by Bush and Trump, a rebuff ensued. Those opposing climate action included the fossil fuel industries and others that sought to profit from the status quo. Climate crisis activism of the 21st century is the story of the tension between those wishing to continue business as usual and those seeing their futures directly impacted by such choices and demanding climate justice. This is a guide to understanding climate policy and activism, highlighting the participants, the progression of environmental science, and the pendulum of national policy under changing parties in power.

Air Transport in the 21st Century John F. O'Connell, George

Williams, 2016-12-05 Airlines are buffeted by fluctuating political and economic landscapes, ever-changing competition, technology developments, globalization, increasing deregulation, and evolving customer requirements. As a consequence, all sectors of the air transport industry are in a constant state of flux. The principle aim of this book is to review current trends in the airline industry and its related suppliers, thereby providing an insight into the forces that are changing its dynamics. The factors that are reshaping the structure of the industry are examined with a view to identifying the key issues whose impact will be critical in the future. The book features two very distinct sections. The first contains short contributions from industry executives at CEO/VP level from airlines, aircraft engine manufacturers, safety and navigational provider organisations who have set out their take on where the airline industry is heading. This commercial input sets the scene for the book and provides the bridge to the second section, which is composed of 18 chapters written by distinguished academic authors. Each chapter presents a valuable insight into a specific area of the air transport industry, including airlines, airports, cargo,

deregulation the environment navigation strategy information technology security and tourism The shared objective of the authors is to describe and explain the core competencies that are determining the current shape of the industry and to examine the forces that will change its direction going forward The book is written in a management style and will appeal to all levels of personnel who work for airlines across the world It is also written for airport authorities aerospace manufacturers regulatory and government transportation agencies researchers and students of aviation management transport studies tourism and the wider air transport industry
