Staufenbiel, 2013-03-09 This volume contains the results of the International Conference on Managing Enterprises of the New Economy by Modern Concepts of the Theory of the Firm which took place in Hagen from 12-14 December 2002 The conference was organised jointly by the FernUniversität in Hagen and the Erich Gutenberg Arbeitsgemeinschaft in Cologne The Deutsche Forschungsgemeinschaft the FernUniversität and the Märkische Bank in Hagen provided generous financial support for the conference and in fact enabled its implementation and the publication of this record of the proceedings We would like to express our gratitude to the sponsors for their support The aim of the conference was the exchange of academic experience with regard to new approaches to and extensions of the theory of the firm that can be used to solve the problems of New Economy companies The starting point was the practical experience that the owners and managers of New Economy companies paid too little attention to functional company controls in the general euphoria regarding future economic trends and that because of this the enterprises got into difficulties or were faced with threats to their survival These control deficits were detected equally in the areas of sales production personnel planning organisation and finance and in the arrangement of management and control structures Deficiencies in company evaluations and accounting led to investors experiencing severe disappointment on the loss of their invested capital

Economic Simulations in Swarm: Agent-Based Modelling and Object Oriented Programming Francesco Luna, Benedikt Stefansson, 2012-12-06 Computer simulations of economic systems are slowly gaining ground within the economic profession However such a process is hindered by a lack of communication among researchers who do not share a common language For its object oriented structure and its versatility Swarm has the necessary characteristics to become a credible universal language of agent based simulations Economic Simulations in Swarm collects a series of original articles in such domains as macro and micro economics industrial organization monetary

theory and finance all linked by a common denominator the use of the Swarm simulation platform Swarm a standard set of program libraries allows users to construct simulations where a collection of heterogeneous independent agents or elements interact through discrete events This volume offers the first extensive tutorial to the use of these software libraries developed at the Santa Fe Institute as part of the ongoing research into complexity The editors conceived the idea of this book while visiting the Santa Fe Institute as members of the Working Group on Adaptive and Computable Economics Francesco Luna is a specialist in Computable Economics and Benedikt Stefansson is an active contributor to the Swarm community

Mathematical Programming and Financial Objectives for Scheduling Projects Alf Kimms, 2012-12-06 Mathematical Programming and Financial Objectives for Scheduling Projects focuses on decision problems where the performance is measured in terms of money As the title suggests special attention is paid to financial objectives and the relationship of financial objectives to project schedules and scheduling In addition how schedules relate to other decisions is treated in detail The book demonstrates that scheduling must be combined with project selection and financing and that scheduling helps to give an answer to the planning issue of the amount of resources required for a project The author makes clear the relevance of scheduling to cutting budget costs The book is divided into six parts The first part gives a brief introduction to project management Part two examines scheduling projects in order to maximize their net present value Part three considers capital rationing Many decisions on selecting or rejecting a project cannot be made in isolation and multiple projects must be taken fully into account Since the requests for capital resources depend on the schedules of the projects scheduling taken on more complexity Part four studies the resource usage of a project in greater detail Part five discusses cases where the processing time of an activity is a decision to be made Part six summarizes the main results that have been accomplished

Project Scheduling with Time Windows and Scarce Resources Klaus Neumann, Christoph Schwindt, Jürgen Zimmermann, 2012-12-06 A survey of the state of the art of deterministic resource constrained project scheduling with time windows General temporal constraints and several different types of limited resources are considered A large variety of time based financial and resource based objectives important in practice are studied A thorough structural analysis of the feasible region of project scheduling problems and a classification and detailed investigation of objective functions are performed which can be exploited for developing efficient exact and heuristic solution methods New interesting applications of project scheduling to production and operations management as well as investment projects are discussed in the second edition
