Jeucken,Leon Klinkers,2017-09-08 This comprehensive addition to the debate on sustainable development has been produced in order to take a global pulse on how the financial services sector is responding to the growing challenge of shareholder and stakeholder expectations on social and environmental performance In the opinion of many commentators in this new book given the intermediary role banks play within economies their potential contribution toward sustainable development is enormous Indeed for banks the conclusion that corporate sustainability has become an investable concept that increases long term shareholder value is becoming difficult to deny To date banks have been relatively slow to examine their exposure to risk the environmental and social performance of their clients and the business opportunities of sustainable development the products and services they offer Not before time Sustainable Banking concludes that this is beginning to change with both risk and opportunity becoming established elements in banking policies towards environmental sustainability In addition banks have now begun to take notice of and address their own environmental performance Through the use of case studies and detailed analysis the book examines the environmental policies of banks the importance of transparency and communication with their stakeholders environmental and ethical investment funds current practice by the providers of financial services with regard to environmental risk management and finally the key role of government NGOs and multilateral banks in delivering sustainability Sustainable banking has not however been achieved and nor will it be in the immediate future As globalisation proceeds apace Sustainable Banking argues that improvements are necessary in banks attitudes toward transparency and accountability with regard to their lending policies In addition in order to promote best practice the leading banks need to start measuring their customers environmental performance in order to persuade polluting clients that minimum compliance to regulations will no longer suffice The book finds many shining examples in the co operative mutual and social sectors for the big players to emulate Environmental and ethical considerations in such loan portfolios have proven to be profitable and best in class larger banks are now also reaping benefits The unprecedented scope of the book has attracted contributors from four continents including Deloitte Touche Rabobank The World Bank The European Bank for Reconstruction and Development The United Nations Environment Programme The World Business Council for Sustainable Development UBS Henderson Investors KPMG The World Resources Institute and SAM Sustainability

**Environmental Regulation Through Financial Organisations:Comparative Perspectives on the Industrialised Nations** Benjamin Richardson,2002-02-13 This book takes a comparative perspective of practice in the European Union North America Japan and Australasia arguing that existing legal reforms to promote sustainable development are unlikely to be successful unless environmental policy can be diffused and embedded in the financial services sector This sector plays a crucial role in creating the financial conditions that allow much economic development to proceed Financial markets are already highly regulated in pursuance of various public policy objectives and there is scope to adapt existing regulation to incorporate environmental aspects into the financial services sector In terms of specific reforms the book focuses on the role of corporate environmental reporting economic instruments and liability rules to provide a proper context for engaging financial organisations with the environment as well as reforms to the system of prudential regulation that currently governs this sector Beyond the focus on the financial services sector the book raises complex questions regarding the relationship between the state and market institutions in environmental policy and will appeal to scholars from a wide range of disciplines interested in problems of environmental governance
