Strategies Jacqueline C. Vischer, 2012-12-06 We live in era of transformation of technology of social values and of the way work is done This book represents a timely and innovative addition to current thinking and writing about transformation in organizations In order to meet an increasingly global and competitive environment organizations are undergoing reengineering work process redesign right sizing creating a virtual office and other forms of restructuring and basic change of the way work is accomplished Such transformation means analyzing and redesigning core processes in organizations around new kinds of principles such as total quality and customer service The eventual effect of these changes is likely to be the networked or boundary less organization in which the traditional boundaries between functions and between producers and their suppliers and sometimes even between organizations and their competitors are broken down The goal of such transformation is to make the work of the organization more efficient and productive to produce more with fewer resources and at a lower cost In the conventional view of the transformation process certain secondary concerns such as the need to protect the environment or to help an increasingly heterogeneous work force deal with its personal issues are seen as problematic for this core thrust Some recent work however is beginning to show that if these so called secondary concerns are considered central far from being problematic they actually present strategy opportunities for productive innovation and change
