## **Making Better Environmental Decisions An Alternative To Risk Assessment:**

Making Better Environmental Decisions Mary O'Brien, Environmental Research Foundation (Annapolis, Md.), 2000 For the past quarter century government and the private sector have relied heavily on risk assessment for making decisions allowing widespread environmental deterioration In this book Mary O'Brien recommends a simple yet profound shift to another decision making technique alternatives assessment Instead of asking how much of a hazardous activity is safe which translates into how much damage the environment can tolerate alternatives assessment asks how we can avoid or minimize damage while achieving society's goals Alternatives assessment is a simple commonsense alternative to risk assessment It is based on the premise that it is not acceptable to damage human and nonhuman health or the environment if there are reasonable alternatives The approach calls for taking precautionary measures even if some cause and effect relationships have not been fully established scientifically The process must involve an examination of the full range of alternatives including no action at all Equally important it must be democratic and include potentially affected parties O'Brien not only makes a persuasive case for alternative assessment she tells how to implement it She also shows how this technique has profound implications for public health for our stewardship of the environment and for a truly democratic government Published in association with the Environmental Research Foundation *O Wechsel ist denn hier der Orth....* ,1680

*Making Better Environmental Decisions* Mary O'Brien, Environmental Research Foundation (Annapolis, Md.), 2000 This work recommends a simple yet profound shift to another decision making technique alternatives assessment Instead of asking how much of a hazardous activity is safe alternatives assessment asks how we can avoid or minimize damage **The Oxford Handbook of Law, Regulation and Technology** Roger Brownsword, Eloise Scotford, Karen Yeung, 2017 The variety pace and power of technological innovations that have emerged in the 21st Century have been breathtaking These technological developments which include advances in networked information and communications biotechnology neurotechnology nanotechnology robotics and environmental engineering technology have raised a number of vital and complex questions Although these technologies have the potential to generate positive transformation and help address grand societal challenges the novelty associated with technological innovation has also been accompanied by anxieties about their risks and destabilizing effects Is there a potential harm to human health or the environment What are the ethical implications Do these innovations erode or antagonize values such as human dignity privacy democracy or other norms underpinning existing bodies of law and regulation These technological developments have therefore spawned a nascent but growing body of law and technology scholarship broadly concerned with exploring the legal social and ethical dimensions of technological innovation This handbook collates the many and varied strands of this scholarship focusing broadly across a range of new and emerging technology and a vast array of social and policy sectors through which leading scholars in the field interrogate the interfaces between law emerging technology and regulation Structured in five parts the handbook I

establishes the collection of essays within existing scholarship concerned with law and technology as well as regulatory governance II explores the relationship between technology development by focusing on core concepts and values which technological developments implicate III studies the challenges for law in responding to the emergence of new technologies examining how legal norms doctrine and institutions have been shaped challenged and destabilized by technology and even how technologies have been shaped by legal regimes IV provides a critical exploration of the implications of technological innovation examining the ways in which technological innovation has generated challenges for regulators in the governance of technological development and the implications of employing new technologies as an instrument of regulatory governance V explores various interfaces between law regulatory governance and new technologies across a range of key social domains

**Precaution, Environmental Science, and Preventive Public Policy** Joel Tickner, 2002-12 The precautionary principle the idea that society should guard against potentially harmful activities even if some cause and effect relationships have not been fully established has often been attacked for being unscientific However leading scientists studying the issue have begun to make the case that the precautionary principle is in fact science based and that it creates a need for more rigorous and transparent science in examining complex and uncertain environmental risks Precaution Environmental Science and Preventive Public Policy is the first book to explore the role of science in developing a more precautionary approach to environmental and public health policy The book brings

together leading scientists legal experts philosophers environmental health professionals and environmentalists to offer a multi disciplinary perspective on the controversial debate over science and precaution The book discusses the critical need for science in promoting sustainability outlines the ethical imperative of a more precautionary science and the philosophical foundations of that new approach considers some of the ways in which the current conduct of environmental science works against precautionary policies examines how the role and use of science differs across cultures and political systems provides the components of an approach to environmental science that more effectively supports precautionary decisions The book also offers case studies that consider various types of uncertainty and sets forth a framework for evaluating and addressing uncertainty in decision making Contributors include Juan Almendares Katherine Barrett Kamaljit Bawa Finn Bro Rasmussen Donald Brown Theofanis Christoforou Terry Collins Barry Commoner Carl Cranor Stephen Dovers David Gee Elizabeth Guillelte Cato ten Hallers Tjabbes James Huff Matthias Kaiser Richard Levins Mary O Brien Carolyn Raffensperger Jerry Ravetz Vandana Shiva Boyce Thorne Miller Joe Thornton Reginald Victor and Alistair Woodward Precaution Environmental Science and Preventive Public Policy presents a broad overview of the role of science in implementing the precautionary principle and makes a compelling case that science should be used not just to study problems but to develop solutions
