Marcosandmarjan Inhabitable Walls:

The Inhabitable Flesh of Architecture Marcos Cruz, 2017-03-02 Today's architecture has failed the body with its long heritage of purity of form and aesthetic of cleanliness. A resurgence of interest in flesh especially in art has led to a politics of abjection completely changing traditional aesthetics and is now giving light to an alternative discussion about the body in architecture. This book is dedicated to a future vision of the body in architecture questioning the contemporary relationship between our Human Flesh and the changing Architectural Flesh. Through the analysis and design of a variety of buildings and projects, Flesh is proposed as a concept that extends the meaning of skin, one of architecture's most fundamental metaphors. It seeks to challenge a common misunderstanding of skin as a flat and thin surface. In a time when a pervasive discourse about the impact of digital technologies risks turning the architectural skin ever more disembodied, this book argues for a thick embodied flesh by exploring architectural interfaces that are truly inhabitable. Different concepts of Flesh are investigated not only concerning the architectural and aesthetic but also the biological aspects. The latter is materialised in form of Synthetic Neoplasms which are proposed as new semi-living entities rather than more commonly derived from scaled-up analogies between biological systems and larger-scale architectural constructs. These neoplastic creations are identified as partly designed object and partly living material in which the line between the natural and the artificial is progressively blurred. Hybrid technologies and interdisciplinary work methodologies are thus required and lead to a revision of our current architectural practice.

Protoarchitecture Bob Sheil, 2008-08-04 The illusive and uncertain world of translating ideas into matter is a negotiation between the ideal and the real and a central preoccupation of architectural production. By invading the toolbox of digital fabrication, design has transgressed into protocols of manufacturing previously the domain of other disciplines and skills sets. Craft, assembly and installation, once the realm of trades, are qualities that are now dependent upon design information and its status as an instruction to make. The ensuing loop between the physical and tactile, the imaginary and speculative, has defined a new expectation in making architecture as a construct that is part real, part ideal. With contributions from Lebbeus Woods, Evan Douglas, Theo Jansen, Shin Egashira and many more, Protoarchitecture presents an explicitly diverse collection of works from leading and emerging practitioners, educators, researchers and visionaries from all corners of this innovative field.

Digital Poetics Dr Marjan Colletti, 2013-12-31 Digital Poetics celebrates the architectural design exuberance made possible by new digital modelling techniques and fabrication technologies. By presenting an unconventional and original humanistic theory of CAD computer-aided design, the author suggests that beyond the generation of innovative engineering forms, digital design has the potential to affect the wider complex cultural landscape of today in profound ways. The book is linked to a website which contains a larger selection of images of some featured projects.
