## **Mares Milk:**

Koumiss, or fermented mare's milk, and its uses in the treatment and cure of pulmonary consumption and other wasting diseases George L. Carrick, 1881      Handbook of Milk of Non-Bovine Mammals Young W. Park, George F. W.

Haenlein, 2008-02-28 No one can deny the fact that the cow is the primary dairy animal species to provide humans with nutritious dairy foods through its abundance of lacteal secretion. The goat or other minor dairy species will never be able to compete with the cow in terms of the volume of milk production. Yet the contribution of milks from other secondary domesticated dairy species to the survival and well-being of mankind around the world is immense and invaluable. Testament to the importance of non-bovine milk is that more people drink the milk of goats than that of any other single species in the world. In developing and underdeveloped countries the secondary dairy species play a crucial role in supplying the food and nutritional needs of the people in those regions. Due to the unavailability of cow milk and the low consumption of meat the milks of minor species such as goat, buffalo, sheep and camel are critical daily food sources of protein, phosphate and calcium. Furthermore, because of important and inherent hypoallergenic properties, milks of certain species such as goat milk have been recommended as substitutes in diets for those with cow milk allergies. Editors Park and Haenlein have assembled dairy and nutrition experts from around the world to contribute to the Handbook of Milk of Non-Bovine Mammals. Secondary dairy species addressed are the goat, sheep, buffalo, mare, camel, yak, deer, reindeer, sow, llama, alpaca, moose, musk ox, caribou, ass, elk, pinniped, polar bear and human. The book comprehensively covers the most important aspects of milk production including trends and methods of raw milk production in different regions, compositional, nutritional, therapeutic, physico-chemical and microbiological characteristics of the milks, processing technology and types, distribution and consumption of the manufactured products from minor species milks. Of special note is coverage comparing specific human health attributes of milk from the various species including nutritional, allergenic, immunological and cultural factors. Because secondary dairy species have such a significant impact on human well-being and survival in many parts of the world, the Handbook of Milk of Non-Bovine Mammals is an essential reference book of leading edge information for dairy scientists, nutritionists, food chemists, allergy specialists, health professionals and allied professionals.      **Bioactive Components in Milk and Dairy**

**Products** Young W. Park, 2009-09-15 Although bioactive compounds in milk and dairy products have been extensively studied during the last few decades, especially in human and bovine milks and some dairy products, very few publications on this topic are available, especially in other dairy species milk and their processed dairy products. Also, little is available in the areas of bioactive and nutraceutical compounds in bovine and human milks while books on other mammalian species are nonexistent. Bioactive Components in Milk and Dairy Products extensively covers the bioactive components in milk and dairy products of many dairy species including cows, goats, buffalo, sheep, horse, camel and other minor species. Park has assembled a group of internationally reputed scientists in the forefront of functional milk and dairy products, food science and technology as

contributors to this unique book Coverage for each of the various dairy species includes bioactive proteins and peptides bioactive lipid components oligosaccharides growth factors and other minor bioactive compounds such as minerals vitamins hormones and nucleotides etc Bioactive components are discussed for manufactured dairy products such as caseins caseinates and cheeses yogurt products koumiss and kefir and whey products Aimed at food scientists food technologists dairy manufacturers nutritionists nutraceutical and functional foods specialists allergy specialists biotechnologists medical and health professionals and upper level students and faculty in dairy and food sciences and nutrition Bioactive Components in Milk and Dairy Products is an important resource for those who are seeking nutritional health and therapeutic values or product technology information on milk and dairy products from the dairy cow and species beyond Areas featured are Unique coverage of bioactive compounds in milks of the dairy cow and minor species including goat sheep buffalo camel and mare Identifies bioactive components and their analytical isolation methods in manufactured dairy products such as caseins caseinates and cheeses yogurt products koumiss and kefir and whey products Essential for professionals as well as biotechnology researchers specializing in functional foods nutraceuticals probiotics and prebiotics Contributed chapters from a team of world renowned expert scientists
