## **Marginalism And Discontinuity Tools For The Crafts Of Knowledge And Decision:**

**Marginalism and Discontinuity** Martin H. Krieger, 1989-11-21 Marginalism and Discontinuity is an account of the culture of models employed in the natural and social sciences showing how such models are instruments for getting hold of the world tools for the crafts of knowing and deciding Like other tools these models are interpretable cultural objects objects that embody traditional themes of smoothness and discontinuity exchange and incommensurability parts and wholes Martin Krieger interprets the calculus and neoclassical economics for example as tools for adding up a smoothed world a world of marginal changes identified by those tools In contrast other models suggest that economies might be sticky and ratchety or perverted and fetishistic There are as well models that posit discontinuity or discreteness In every city for example some location has been marked as distinctive and optimal around this created differentiation a city center and a city periphery eventually develop Sometimes more than one model is applicable the possibility of doom may be seen both as the consequence of a series of mundane events and as a transcendent moment We might model big decisions or entrepreneurial endeavors as sums of several marginal decisions or as sudden marked transitions changes of state like freezing or religious conversion Once we take models and theory as tools we find that analogy is destiny Our experiences make sense because of the analogies or tools used to interpret them and our intellectual disciplines are justified and made meaningful through the employment of characteristic toolkits a physicist's toolkit for example is equipped with a certain set of mathematical and rhetorical models Marginalism and Discontinuity offers a provocative and wide ranging consideration of the technologies by which we attempt to apprehend the world It will appeal to social and natural scientists mathematicians and philosophers and thoughtful educators policymakers and planners **The Right Tools for the Job** Adele E. Clarke, Joan H.

Fujimura, 2014-07-14 This volume examines scientific practice through studies of research tools in an array of twentieth century life sciences The contributors draw upon and extend the multidisciplinary perspectives in current science studies to understand the processes through which scientific researchers constructed the right and in some cases the wrong tools for the job The articles portray the crafting or accessing of specific materials techniques instruments models funds and work arrangements involved in doing scientific work They demonstrate the historical and local contingencies of scientific problem construction and solving by highlighting the articulation between the tools and jobs Indeed the very rightness of the tools is contingently constructed maintained lost and refashioned The cases examined include evolutionary biology laboratory systems James R Griesemer the plasmid prep procedure in molecular biology Kathleen Jordan and Michael Lynch models in the human ecology of African pastoralists Peter Taylor the micromanometer in metabolic studies Frederic L Holmes genetics research and the role played by Planaria Gregg Mitman and Anne Fausto Sterling and by corn Barbara A Kimmelman quantitative data in field biology Yrj Haila taxidermy in natural history Susan Leigh Star technical standardization in bacteriology Patricia Peck Gossell and the discipline of immunology as the tool for stabilizing conceptual definitions in the

field Peter Keating Alberto Cambrosio and Michael Mackenzie Originally published in 1992 The Princeton Legacy Library uses the latest print on demand technology to again make available previously out of print books from the distinguished backlist of Princeton University Press These editions preserve the original texts of these important books while presenting them in durable paperback and hardcover editions The goal of the Princeton Legacy Library is to vastly increase access to the rich scholarly heritage found in the thousands of books published by Princeton University Press since its founding in 1905

**Doing Physics** Martin H. Krieger, 2012-11-19 The author of *Doing Mathematics* explores the concepts of physics by demonstrating how physicists think and approach their work *Doing Physics* makes concepts of physics easier to grasp by relating them to everyday knowledge Addressing some of the models and metaphors that physicists use to explain the physical world Martin H Krieger describes the conceptual world of physics by means of analogies to economics anthropology theater carpentry mechanical systems and machine tool design Krieger explains the interaction of elementary particles by referring to the theory of kinship who can marry whom is similar to what can interact with what Likewise the description of physical situations in terms of interdependent particles and fields is analogous to the design of a factory with its division of labor among specialists For this new edition Krieger has revised the text and added a chapter on the role of mathematics and formal models in physics Krieger excellently tells those in our human society outside the physics world how physicists think plan and go about understanding nature Choice *Constitutions of Matter* Martin H. Krieger, 1998-04-28 Krieger's lucid discussions will help students of physics and applied mathematics appreciate the larger physical issues behind the mathematical details of modern physics Historians and philosophers of science will gain deeper insights into how theoretical physicists do science while technically advanced general readers will get a rare behind the scenes glimpse into the world of modern physics

**Eden by Design** Greg Hise, William Deverell, 2000 *Eden by Design* is a compelling and fascinating description of a possible Los Angeles that never came to be Greg Hise and William Deverell have resurrected the Olmsted Brothers 1930 plan for Los Angeles County and then in a wonderful introduction put the plan in context so that to read it now is to see not only what seemed dangerous and possible in 1930 but also how and why one route to the present was chosen over others In their hands the plan acts like a ghost of Los Angeles reminding us about a vanished past lost possibilities and the secrets that our present masks Richard White author of *The Organic Machine* The Report is not only a vital document in the history of Los Angeles but a lost classic of a neglected golden age of city planning and landscape architecture It embodies a truly regional perspective an ecological perspective a long range vision an integration of design with finance and administration and a truly grand interpretation of public space It deserves to be known to every serious student of the American planning tradition Robert Fishman author of *Bourgeois Utopias* The Rise and Fall of Suburbia An essential document for understanding the history of the West's largest city Los Angeles had the opportunity to become an extraordinarily beautiful environment a Paris in the desert The editors make clear why sadly it did not but also they hold out

hope that portions of this brilliant but neglected plan might still be recovered Donald Worster author of *Nature's Economy A History of Ecological Ideas* A welcome addition to the literature of American urban planning history Roger Montgomery Professor of Architecture Emeritus University of California Berkeley *The Humanities in City Planning* Martin Krieger, 2024-10-28 This book by preeminent planning theorist Martin H Krieger explores how cities are much more than their economies demographics or geographies Planning today is dominated by social science but Krieger takes a different approach thinking of city planning in terms of Culture Uncertainty and Visuality The chapters explore planners and their role as protagonist in the humanities of literature and history the inevitability of uncertainty in planning and how to face it and how to attend to the physical visual and aural environment of the city Through a series of essays Krieger shows that cities are cultural and meaningful that they are contingent and so filled with opportunity and that they are concrete particular and encountered *The Humanities in City Planning* will be of interest to students and scholars of the humanities and planning looking for alternative ways of viewing the city

**Doing Mathematics: Convention, Subject, Calculation, Analogy (2nd Edition)** Martin H Krieger, 2015-01-15 *Doing Mathematics* discusses some ways mathematicians and mathematical physicists do their work and the subject matters they uncover and fashion The conventions they adopt the subject areas they delimit what they can prove and calculate about the physical world and the analogies they discover and employ all depend on the mathematics what will work out and what won't The cases studied include the central limit theorem of statistics the sound of the shape of a drum the connections between algebra and topology and the series of rigorous proofs of the stability of matter The many and varied solutions to the two dimensional Ising model of ferromagnetism make sense as a whole when they are seen in an analogy developed by Richard Dedekind in the 1880s to algebraicize Riemann's function theory by Robert Langlands program in number theory and representation theory and by the analogy between one dimensional quantum mechanics and two dimensional classical statistical mechanics In effect we begin to see an identity in a manifold presentation of profiles as the phenomenologists would say This second edition deepens the particular examples it describes the practical role of mathematical rigor it suggests what might be a mathematician's philosophy of mathematics and it shows how an ugly first proof or derivation embodies essential features only to be appreciated after many subsequent proofs Natural scientists and mathematicians trade physical models and abstract objects remaking them to suit their needs discovering new roles for them as in the recent case of the Painlevé transcendents the Tracy Widom distribution and Toeplitz determinants And mathematics has provided the models and analogies the ordinary language for describing the everyday world the structure of cities or God's infinitude

*Southern California and the World* Eric J. Heikkilä, Rafael Pizarro, 2002-10-30 As underscored by the emergence of the Los Angeles school of contemporary urban studies the Southern California experience its popular culture politics economics spatial structure ethnic diversity technologies and lifestyles has an impact and relevance well beyond its own immediate geographic setting This book explores the parallel and interlinked constructions of identities

imaginings and activities in and between Southern California and the world beyond In particular the volume shows how the local and global are interfused with one another making it evident that the connections involve more than a process of globalization Approaching the subject from three perspectives the volume considers how the Southern Californian way of life as reflected through entertainment politics legal institutions technology cultural trends influences the lifestyles of other parts of the world how Southern California as a primary repository of peoples and cultures from throughout the world absorbs and transforms this living diaspora of foreign cultures into something that is uniquely Southern Californian and how Southern California functions as a major nexus within a global network of linked activities and the special roles of Southern California within the context of these global networks The book provides a panoramic and stimulating perspective on the multiplexed connectivities between global phenomena and the Southern California experience **From Chicago to L.A.** Michael

Dear, 2001-07-31 For most of the twentieth century the principles of the Chicago School have guided urban analysts throughout the world Los Angeles has been regarded as an exception to the rules governing the growth of American cities But just as the Chicago School emerged at a time when that city was reaching new national prominence Los Angeles is now making its impression on the minds of urbanists across the world From Chicago to L A begins the task of defining an alternative agenda for urban studies and examines the case for shifting the focus of urban studies from Chicago to Los Angeles The authors experienced scholars from a variety of disciplines examine The concepts that have blocked our understanding of Southern California cities The imaginative structures that people have been using to understand and explain Los Angeles The utility of the Los Angeles School of urbanism **Essays on the Future** Siegfried

Hecker, Gian-Carlo Rota, 2000-09-29 This collection represents a unique undertaking in scientific publishing to honor Nick Metropolis the last survivor of the World War II Manhattan Project in Los Alamos In this volume some of the leading scientists and humanists of our time have contributed essays related to their respective disciplines exploring various aspects of future developments in science and society philosophy national security nuclear power pure and applied mathematics physics and biology particle physics computing and information science Similarities, Connections, and Systems Niraj Verma, 1998-01-01 Since the early 1970s the formal model of rational inquiry has come under increasing attack by scholars as well as practitioners in the business management planning and policy professions Critics tell us that it ignores sentiments and emotions that are key to understanding professional practice Yet despite the attacks there are few competitors for rationality and no usable alternative has emerged to take its place in the profession Clearly a new practical paradigm is called for and in this groundbreaking work Niraj Verma goes beyond the criticism of rationality to present a bold alternative model of inquiry a new rationality for the professions Inspired by the work of pragmatist William James Verma proposes a methodology that fuses the rational and the irrational to offer professionals an approach to inquiry that more completely examines all of the factors that impact the planning process in a practical systematic way An illuminating blend of philosophy

critique and down to earth examples Similarities Connections and Systems introduces a new methodologically sound model of inquiry that aptly addresses the shortcomings of other models while remaining sensitive to the goals of professional practice    *Journal of Planning Literature* ,1990    *Journal of Economic Literature* ,1990    **Abstracts of Papers** American Association for the Advancement of Science.
